Central Utility Plant (CUP) – Capacity Expansion
Request for Proposals
Project # 18-135884

Monday November 12, 2018
ADDENDUM 1

QUESTIONS/RESPONSES:

1. If required, can the boiler plant run in the summer for an extended period on fuel oil in lieu of natural gas?

   **Response:** The boiler plant can be operated in the summer on fuel oil as necessary to facilitate the expansion project.

2. Is the existing electrical equipment configured so that connection of new medium voltage equipment can be done safely without an outage?

   **Response:** Connection of the new medium voltage electrical equipment will require planned short-duration plant outage(s) to accommodate the project. This work may require off-hours staffing to accommodate the outage.

3. Will the new boiler physically fit under the existing mezzanine?

   **Response:** Although this project is very early in the design phase, the future selected boiler will be sized to fit under the existing mezzanine.

4. Would it be possible to extend the interview date at all to allow for adequate preparation time after the shortlist is announced?

   **Response:** No. We believe a week and a half after the shortlist announcement is sufficient time to prepare for the interviews.
