This questionnaire will provide information which will be used to calculate the proper amount allocations that will be assessed to your new program. The cost allocation process identifies the estimated costs of providing services such as utilities, maintenance and repairs, personnel services, purchasing services, etc. to each unit at the Health Sciences Center. Actual charges are then allocated to individual programs either through the indirect cost rate (sponsored programs) or a cost allocation tax (Auxiliary/Self Funded activities). State funded accounts are exempt since the State of Colorado appropriates funding for these activities.
