

Sole Patches

giving lonely soles a second chance...

Waste **insoles** from

boot manufacturing

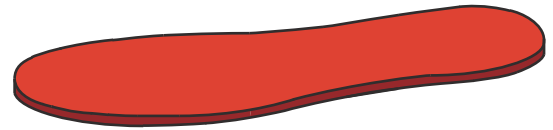

were used to make a

“pop art” **bath mat.**

The process

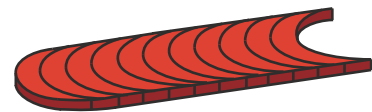

1

Insoles were arranged into color pattern

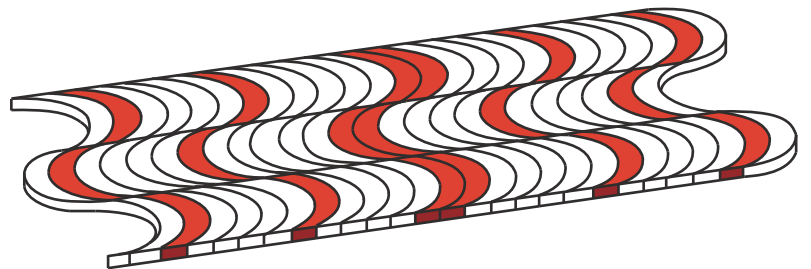

2

The rounded end of each sole was cut to yield a crescent shape

3

The shapes were joined and sewn on an industrial sewing machine

4

The results are a waterproof, soft, colorful welcoming bath mat to step out of the shower
