TEAM INFORMATION

Team Name/Project Title: Avian SSL API

Department: Computer Science

Faculty Advisor(s): Debra Parcheta

Team Members: Jason Minor, Long Huynh, Greg Peters

PROJECT INFORMATION

Description:

An SSL encryption library for Avian, an open-source, light-weight alternative to Java.

Abstract:

Avian is an open-source project, which offers Java developers to create apps that do not require the Java virtual machine to run. Our contribution to this project includes an implementation of the Secure Socket Layer/Transport Layer Security library, which would allow Avian users to include data encryption and decryption into their apps for secure networking.
