TEAM INFORMATION

Team Name/Project Title: Locksmith Team
Department: Computer Science
Faculty Advisor(s): Debra Parcheta
Team Members: Ivan Mora, Brian Dignam, Kyle Daley

PROJECT INFORMATION

Description:

Locksmith is an Android library that uses the google drive platform for secure sharing files between multiple applications and platforms.

Abstract:

Locksmith is an android application that uses the google drive platform for secure sharing of files on a user’s google account. This native android application includes features such as creating folders and files, as well as uploading files to a google drive. This android application is then converted into a Java library so the same functionality can be available to other developers on other mobile operating systems.
