TEAM INFORMATION

Team Name/Project Title: Collector

Department: College of Engineering, Computer Science and Engineering

Faculty Advisor: Debra Parcheta

Team Members: Jake, Bourgoin, Kainos Gurung, Yang Han

PROJECT INFORMATION

Description:

A convenient and accurate way records sudden accidents.

Abstract:

When incidents happen, providers in healthy centers usually write down the incident records after handling the emergencies, which are imprecise and easily losing. Our project allows healthy center to record data using phones. Based on our first demo that we finished last semester, we develop it to a real mobile application, which is divided into admin part and provider part. Providers only need to click the buttons to achieve quick patients finding and safe incidents saving, and the whole process just takes 4 seconds. Admin functions are more comprehensive: tracking patients with associated behavior, managing providers, patients and behaviors, editing data and downloading data to xml files and gathering data to generate graphs. For security issues, we added super admin to manage admins.
