Master of Public Health
Environmental & Occupational Health Concentration

Environmental & Occupational Health
Colorado School of Public Health
The Department of Environmental and Occupational Health at the Colorado School of Public Health focuses on preventing environmental and occupational health related disease and promoting health through our education, research, and community service. Our MPH program on the University of Colorado Anschutz Medical Campus prepares students to contemplate the causes and consequences of contaminated environments on human health and the ways in which public health professionals can intervene to improve the environment at home, in the workplace, and in the broader community.

From risk assessment and injury prevention to policy and healthy community design, we offer courses and curriculum to meet students’ varied interests. In addition to our MPH program, the Department is home to the Occupational & Environmental Medicine Residency Program, a DrPH program, and offers certificates in Total Worker Health® and Public Health Preparedness & Disaster Response.

Assistant Professor
Residency Director
The Department of Environmental & Occupational Health focuses on preventing environmental and occupational health-related diseases and promoting health through education, research, professional and community service. Our programs prepare students to contemplate the causes and consequences of chemical contamination and poorly designed environments on human health and the ways in which public health professionals can intervene to improve the environment.
