Managing Depression and Enhancing Wellness through COVID-19

Alex J. Reed, PsyD, MPH
Director of Behavioral Health Education
Objectives

- Learn to identify signs of depression (or mood concerns) during stressful times
- Describe evidence based tools to boost your mood
- Identify resources and strategies to manage isolation and connect with others
This outbreak puts us all at risk for mood symptoms

- Fear and worry about your own health and the health of your loved ones
- Sad feelings
- Changes in eating patterns
- Difficulty sleeping
- Difficulty concentrating
- Irritability
- Fatigue or Restlessness
- Pessimism or hopelessness

Audience Poll:
What mood symptoms have you been experiencing during this pandemic?
What to do when you’re feeling down during this outbreak
Do something pleasurable

- Behavioral Activation
- Schedule pleasurable activities
- As effective as cognitive therapy and some antidepressants

Deep Breathing

- Exhale completely through your mouth, making a whoosh sound.
- Close your mouth and inhale quietly through your nose to a mental count of four.
- Hold your breath for a count of seven.
- Exhale completely through your mouth, making a whoosh sound to a count of eight.
- This is one breath. Now inhale again and repeat the cycle three more times for a total of four breaths.

Investigators have found that exercise improves symptom in people with depression compared with control treatment or no intervention.

Begin exercising slowly and choose an enjoyable mode of exercise which can result in a more positive exercise experience and increase the likelihood of maintained exercise involvement.

Cognitive Disputation

- Try questioning your thoughts by asking yourself a question when they are experiencing stressed or depressed thoughts such as, “If my best friend or someone I love had this thought, what would I tell them?” or “If you were to ask or tell yourself that, how do you think that would be helpful?”

- Questions such as these can allow you to respond in ways that are consistent with your values (e.g., being friendly) instead of reacting to your initial negative thoughts.

3 Good Things

Each day for at least one week, write down three things that went well for you today.

The items can be relatively small (e.g., “my partner made the coffee today”) or large (e.g., “I earned a big promotion”).

Give the event a title (e.g., “My daughter made a hilarious joke”).

Write down exactly what happened in as much detail as possible, including what you did or said and, if others were involved, what they did or said.

Include how this event made you feel at the time and how this event made you feel later (including now, as you remember it).

Explain what you think caused this event—why it came to pass.

Use whatever writing style you please, and do not worry about perfect grammar and spelling. Use as much detail as you’d like.

The Mediterranean Diet
Sleep

▶ Get out of bed if you don’t fall asleep fairly soon. Return to bed only when you are sleepy. When you feel sleepy, return to bed. The goal is to reconnect your bed with being asleep.

▶ Make your bedroom like a cave

▶ Dark

▶ Cool

▶ Quiet

Limit exposure to the news
Put Feelings Into Words

- Putting your feelings into words helps to reduce stress
- Talk with someone you trust
- Choose the right time to talk

Courtesy: Alex J. Reed, CU School of Medicine © 2020
Write Out Your Feelings

- Holding back feelings and thoughts is associated with long term stress and disease
- Writing about upsetting experiences helps to improve the immune system and reduce stress

Bonus! These tools work for kids!
Audience Poll:
Which of these tools have tried?
Audience Poll:
Which of these tools will you try?
If these feelings become so overwhelming
