Dear Colleague:

Having access to up-to-date salary information is essential for hiring managers. Employers must offer competitive compensation to recruit the most in-demand talent. Even businesses with no immediate hiring plans are wise to monitor salary trends in the event of unplanned turnover or sudden opportunities for growth.

To assist you, we are pleased to offer the Robert Half Technology Salary Guide 2011, which details starting salary ranges for professionals throughout the IT field. Our online Salary Center, www.rht.com/salarycenter, features additional analysis of hiring and compensation trends, our latest research findings, and the Robert Half Technology Salary Calculator.

To learn more about our services and the many resources available to you, please visit www.rht.com.

Sincerely,

Max Messmer
Chairman and CEO
For years, educational institutions, local and national media outlets, and research entities such as the U.S. Department of Labor’s Bureau of Labor Statistics have consulted our annual Salary Guide for the most comprehensive information on compensation and hiring in the fields we serve. We hope this resource will be useful in your recruitment efforts.

Information in the guide is derived from a wide range of sources, including:

- Thousands of full-time and interim placements made by our professionals across North America
- Local insight from our staffing and recruiting professionals throughout our branch network
- Exclusive workplace research we conduct regularly among chief information officers (CIOs) and other senior executives
- An analysis of the hiring environment and an extrapolation of current trends into 2011

### Adjusting for Local Markets

In each job category, the salary ranges listed represent starting compensation only, because hard-to-measure factors such as seniority and job performance can affect ongoing pay. Bonuses, incentives and other benefits are not taken into account.

The figures in the Salary Guide are national averages. To adjust them to your local market, please see Page 14 for the United States or Page 22 for Canada. A Robert Half Technology representative can offer additional assistance in creating compensation packages that are customized to your business.

To ensure our salary data and other information are up-to-date, we publish a new guide every year. In addition, we feature current hiring and employment trends at our Salary Center, [www.rht.com/salarycenter](http://www.rht.com/salarycenter), where you also will find our Salary Calculator.

To help businesses better understand the current hiring environment and benchmark compensation levels, the *Salary Guide 2011* from Robert Half Technology lists average starting salaries for more than 70 positions in the IT field. Also included are helpful tips and other information to assist business owners and company managers in the hiring process.
Businesses recognize that creating a solid, knowledgeable IT team is indispensable to remaining competitive. And, yet, doing so remains a challenge. In a survey of CIOs by Robert Half Technology, 64 percent of executives interviewed said understaffing within IT departments has compromised their ability to implement innovative or emerging technologies.

To help remedy this situation, many firms are augmenting their IT teams to support web development, handle laptop rollouts, contribute to social media initiatives, and install and manage custom-built applications and systems, including enterprise resource planning (ERP) and related software upgrades.

Still, companies continue to be highly selective when choosing candidates, which tends to prolong the hiring process. To remain flexible while accessing top talent, companies are bringing in project IT professionals to meet immediate needs and help with special projects. Industries in North America seeing the most hiring activity include healthcare, manufacturing, the nonprofit sector, oil and gas, and high tech.

**IT Staffing at a Glance**

- 64% CIOs who say understaffing in IT interferes with their ability to implement new technologies*
- 51% CIOs who say it is challenging for their companies to find skilled IT professionals*
- 40% Employees who are inclined to look for new job opportunities as the economy improves**

Skills in Demand

IT may be poised for a skills-driven rebound. A wave of new and previously deferred projects, as well as those that will deliver high return on investment, is driving demand for application developers, .NET developers, systems administrators, database administrators and desktop support professionals.

While specific requirements for IT positions vary across industries and regions, there is consistent, widespread demand for the following skill sets:

• **Programming** – Knowledge of .NET, Java, mySQL, PHP, Silverlight, Flex and portal technologies such as SharePoint are highly sought.

• **A business mindset** – Companies seek multifaceted IT professionals with business analysis and project management skills, as well as the ability to understand how technology supports broader business objectives and adds measurable value.

• **Technological proficiency** – Individuals with knowledge of one or more of the major ERP packages and related software are in particular demand, as firms seek to maximize their existing information systems or restart new initiatives put on hold during the past year.

• **Security** – To foil fraud, prevent network breaches and comply with new regulations, companies are hiring professionals to keep confidential information safe and secure.

• **Infrastructure support** – As companies upgrade operating systems and add employees in nontechnical divisions, they are hiring help desk and desktop support professionals and PC technicians, primarily on a project basis.

• **Networking** – To manage the increasing complexity of networks and the challenges of virtualization, cloud computing, Software as a Service and convergence technologies, firms seek IT professionals with a blend of server, software and networking skills.

• **Electronic medical records** – In many areas of the United States, there is a growing need among healthcare organizations for IT professionals with the expertise to install and support medical records software.
Certifications in Demand

In addition to specific job-related skills and capabilities, businesses seek professionals with the following credentials:

- **Cisco certifications** – Cisco Certified Network Associate (CCNA)
- **Linux certifications** – Red Hat Certified Engineer (RHCE)
- **Microsoft certifications** – Microsoft Certified Applications Developer (MCAD), Microsoft Certified IT Professional (MCITP), Microsoft Certified Systems Engineer (MCSE) and Microsoft Certified Technology Specialist (MCTS)
- **Project management certifications** – Project Management Professional (PMP)
- **Security certifications** – Certified Information Systems Security Professional (CISSP), Check Point Certified Security Administrator (CCSA) and Check Point Certified Security Expert (CCSE)
The downturn brought the need for staffing flexibility clearly into focus. Firms that were already employing a mix of temporary and full-time professionals had a built-in buffer that helped many of them avoid large-scale layoffs and easily staff up or down as business needs shifted. Now, more and more companies understand the importance of a flexible approach to managing personnel resources.

Businesses – especially those that downsized significantly during the height of the downturn – recognize the risk associated with being understaffed and unable to take advantage of emerging opportunities. At the same time, they don’t want to repeat overhiring mistakes made during previous growth periods. Firms are finding that augmenting full-time employees with project professionals provides them with greater protection from making costly staffing mistakes, in any economy.

**Finding the Right Mix**

At the heart of any flexible workforce arrangement is a core of high-performing full-time employees. Temporary employees can then be engaged periodically to address short-term needs or serve as technical experts when the required skills for a one-time, labor-intensive project, such as a systems conversion, do not exist in-house. Your firm can bring in these individuals to supplement the core team anytime and for as long as necessary.

An adjustable mix of full-time and project workers allows you to respond quickly to changing demands and requirements. The use of interim employees also can save you money because you are paying for the skills you need only when you need them. In addition, you can minimize overtime expenses and lower the high costs associated with hiring, training and keeping employees on board when business is slow.

Interim employees also make strong candidates for full-time positions. You can evaluate an applicant’s skills and work style firsthand and determine whether he or she is likely to match your needs over the long term.
Working With a Specialist

When adding staff on either a full-time or temporary basis, consider using a staffing firm that specializes in the IT field. By doing so, you can access experienced professionals with different skill sets and at varying compensation levels to match your specific needs. A staffing firm also can make the hiring process more efficient, especially as companies continue to receive a significant number of resumes from applicants who do not meet the job requirements. A staffing professional can evaluate potential employees on your behalf, helping to identify the best match and save you time.

Gone are the days when interim staff were limited to lesser-skilled roles. Today, more and more businesses are tapping the expertise of professionals at all levels. Yours could be among the increasing number of companies finding that supplementing the core team with temporary and project professionals is the best way to get their business growing.
Beyond an intuitive sense that their teams may need additional support, how can an employer determine when it’s really time to hire? Here are five telltale signs:

1. **Overtime is becoming the norm.** If working overtime is the only way your team can avoid falling behind, this is a clear sign you need to add staff. Asking your team members to continually burn the midnight oil can deplete employee morale and lead to turnover.

2. **Service levels and work quality are deteriorating.** Perhaps your company has experienced an unusual increase in returned items and requests for refunds. Or customers are complaining about their experience on your company’s website, or the way your staff treats them. Your workers may be overloaded and feel rushed to complete projects. Be careful, because poor service can quickly hurt your reputation.

3. **‘Non-urgent’ projects are repeatedly deferred.** When workloads spike or critical deadlines loom, lower-priority tasks often get pushed to the back burner. If deliverables are chronically postponed, due dates constantly revised, or projects completely thrown off schedule or scrapped entirely, your organization is likely short-staffed.

4. **Managers are stepping in regularly to handle day-to-day tasks.** If the absence of just one staff member due to illness or other work commitments negatively impacts the entire team and forces you to take on routine tasks because no one else is available, this is another warning sign it’s time to hire.

5. **Your organization can’t move on new opportunities or take on more clients.** Is your organization turning away new business? Is it unable to act on strategic initiatives that could create a competitive advantage simply because there aren’t enough professionals on staff? If so, you may be staring at the biggest red flag of all. The company’s future success may be at risk, so now is the time to think seriously about adding employees.
If your company is using interim professionals, a little preparation on your part will help them quickly get up to speed. Here are eight essential tips for working with project professionals:

- **Give staff a heads-up.** Inform full-time staff members when project professionals are expected to arrive and where in the office they’ll be working. Explain the responsibilities interim staff will assume so there is no confusion.

- **Prepare the workspace.** Make sure the assigned work areas are tidy and stocked with basic office supplies. Double-check that computers are in working order, with the necessary software and permissions to access relevant data.

- **Conduct a mini-orientation.** Give interim employees a tour of your office, not just their assigned work area. Explain your department’s day-to-day workflow and provide a brief summary of policies and procedures. Also take the time to introduce project staff to everyone on the team, including administrative personnel.

- **Make them part of the team.** Include contract workers in all relevant meetings and e-mails concerning their projects. And don’t forget to invite them to team-building activities and informal events, such as office lunch outings.

- **Promote open communication.** Once interim professionals begin working, make it clear you’re happy to answer any questions that may arise. If you know you’ll be busy, be sure to appoint secondary contacts who can handle issues when you’re not available.

- **Recognize their efforts.** Consistently acknowledge the efforts and accomplishments of project professionals, just as you would those of full-time staff. If they know their contributions are valued, they’ll be much more likely to ask important questions — and to make use of constructive criticism.

- **Check in.** Conduct an early assessment of the performance of interim professionals and discuss their progress with your staffing manager. Does the project worker have the right skill set for the job? Is he or she adjusting quickly to your work environment? Talk with your full-time employees, as well, to gather their impressions.

- **Keep in touch with your staffing firm.** Be sure to give your contact at the staffing firm frank feedback about your experience working with the interim professionals he or she provided. If you wish to extend the assignment, inform your staffing manager early on to ensure the employee is not placed on another project.

- Windows Server 2008 skills ................................................................. 6%
- Windows 7 skills .................................................................................. 6%
The starting salary ranges provided on the previous pages reflect the national averages for each position. Approximate salary ranges for your market can be calculated using the formula below and the variance index numbers on Pages 15-17. Our list of local variances features data for more than 130 U.S. cities. The average salary index number for all U.S. cities is 100.

To determine the estimated salary range for a position in your area, follow the process outlined below:

**Calculating the Local Salary Range**

**Example: database administrator in Chicago**

1. Locate the position “database administrator” on Page 11 and your city’s index number. (The index number for Chicago is 123.0.)

2. Move the decimal point in the index number two places to the left (1.230).

3. Multiply the low end of the national salary range ($76,000) by the index number as a percentage (from step two). ($76,000 x 1.230 = $93,480)

4. Repeat step three using the high end of the salary range. ($109,500 x 1.230 = $134,685)

5. The approximate starting salary range for a database administrator in Chicago is $93,480 to $134,685.

The index figures should be used as a guide in determining actual compensation. A number of factors, including company size, employee benefits, the candidate’s skill set and current market conditions, can affect starting salaries. Please consult an account executive with Robert Half Technology for help refining salary packages for your market.

- Windows 7 skills .................................... 7%
To determine the estimated salary range for a position in your area, follow the steps outlined below:

**Example: network architect in Toronto**

1. Locate the position “network architect” on the chart on Page 20 and your city’s index number listed below. (The index number for Toronto is 106.4.)

<table>
<thead>
<tr>
<th>Job Title</th>
<th>2010</th>
<th>2011</th>
<th>% Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>Networking/Telecommunications</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Network Architect</td>
<td>$77,500 - $115,500</td>
<td>$82,000 - $121,000</td>
<td>5.2%</td>
</tr>
</tbody>
</table>

2. Move the decimal point in the index number two places to the left (1.064).

3. Multiply the low end of the national salary range ($82,000) by the index number as a percentage (from step two). ($82,000 x 1.064 = $87,248)

4. Repeat step three using the high end of the salary range. ($121,000 x 1.064 = $128,744)

5. The approximate starting salary range for a network architect in Toronto is $87,248 to $128,744.

No matter the business environment, companies need flexible staffing solutions to quickly and cost-effectively respond to workload fluctuations. That's where Robert Half Technology can help. We are the leading provider of highly skilled temporary and full-time professionals in the IT field.

These qualities make Robert Half Technology the right firm to assist with your staffing needs:

- **Industry-leading reputation** – In 2010, our parent company, Robert Half International, was again ranked by FORTUNE® magazine as the World’s Most Admired Company in the temporary help industry (March 22, 2010). Our customers agree we’re the best at what we do: Nine out of 10 would recommend Robert Half Technology to a colleague.

- **Fast and effective service** – We have access to more than 900,000 experienced IT professionals through our proprietary database. And we personally interview, evaluate skills and check selected references for every individual we place. Our professionals can start right away, and help you get the job done.

- **In-demand professionals** – Robert Half Technology attracts highly skilled job candidates in the IT field because we support their professional development and career advancement. That means we can find a skilled person to meet your business’s unique requirements.

- **A global network** – With more than 100 locations around the world, Robert Half Technology’s deep network of skilled professionals spans the entire globe. We also have access to job seekers other staffing firms don’t because of our alliances with top organizations, including Microsoft, HDI, Oracle, Association of Information Technology Professionals and Technology Councils of North America.

For more information about Robert Half Technology and the ways in which we can help meet your staffing needs, please call (800) 793-5533 or visit www.rht.com.
