Are you interested in learning about how your breast milk helps your baby grow?

- Mother’s breast milk is the best feeding choice for a newborn baby.
- We are looking for pregnant women who are planning on breastfeeding their baby to participate in a research study.
- We’re especially looking for Type 2 Diabetic moms and moms with gestational diabetes, but all who are interested are welcome to participate.

- Study Purpose:
  - To find out how maternal size and diabetes status affect her breast milk
  - To find out what unique parts of breast milk may affect how infants grow.
  - To learn how to ensure infants receive the best nutrition possible

- We are looking for pregnant women who:
  - Are planning on exclusively breastfeeding their infant for at least 4 months
  - Are between 20 and 35 years old and at least 20 weeks into their pregnancy
  - Are planning to deliver their baby at University of Colorado Hospital (UCH).

- Participation will include:
  - Donating several small samples of breast milk and 2 small blood samples over the first 4 months after birth
  - Can bring their baby to Children’s Hospital Colorado two times for body fat measurements
  - Are willing to let study personnel come to their home to measure the baby’s growth

You will be compensated for your travel and participation.
