Healthy Women Needed for Research Study on Estrogen and Brain Function

The purpose of this research is to study how the loss of estrogen affects brain function and the health of blood vessels in women.

Qualifications:
- Women ages 18-50 in good health with normal menstrual cycles
- Completed High-school or equivalent (G.E.D.)
- Non-smokers
- Not using hormonal contraceptives (birth control pills)
- Not taking medications for high blood pressure or high cholesterol

Study participation will include:
- Tests of your memory and thinking
- Functional MRI scan of your brain
- Ultrasound of blood vessels
- Measurement of bone mineral density and body composition
- Blood cholesterol profile
- Compensation provided
