

## **Xenograft Trials Without Additional Risk**

### **Oversight**

The Principal Investigator (PI) will be responsible for the conduct of this study, including the tissue sample and/or specimen collection, handling and use, overseeing participant safety, executing the data and safety monitoring (DSM) plan, and complying with all reporting requirements to local and federal authorities. This oversight will be accomplished through additional oversight from the Data and Safety Monitoring Committee (DSMC) at the University of Colorado Cancer Center (CU Cancer Center). The DSMC is responsible for ensuring data quality and study participant safety for all xenograft studies at the CU Cancer Center. A summary of the DSMC's activities is as follows:

- Conduct of internal audits
- Has the authority to close and/or suspend xenograft studies for safety or conduct issues
- May submit recommendations for corrective actions to the CU Cancer Center's Executive Committee

Xenograft study audits will consist of a review of the regulatory documents, consent forms, and source data verification. Documentation of the audit will then need to be submitted by the PI to the IRB of record at the time of the continuing review.
