GIM Year in Review

2018

Build High Functioning Teams

Differentiate Ourselves

83 publications is inspiring in itself, but what adds significance is the broad spectrum of knowledge they contribute to. Among these publications were 14 diverse categories of research, which represents academic contributions from 94 faculty and staff. Collaborating with colleagues is not only a great way to conduct research and quality improvement, it is an excellent way to grow our esprit de corps.

FUNDING DISCOVERY

- Federal: $5.4 Million
- School of Medicine: $2.7 Million
- Foundation: $4.65 Million
- State: $2.93 Million

GIM's research has been recognized on national and local levels, which is evidenced by the diverse organizations who fund our discoveries year after year. Not only has GIM's research resulted in groundbreaking innovations, it has built a developmental pipeline for budding investigators. As we are faculty who believe in growing the esprit de corps through mentorship. This year, nine faculty members were named as mentors on three grants including: the Doris Duke Charitable Foundation, K22, and T32.

PUBLICATIONS

83 publications is inspiring in itself, but what adds significance is the broad spectrum of knowledge they contribute to. Among these publications were 14 diverse categories of research, which represents academic contributions from 94 faculty and staff. Collaborating with colleagues is not only a great way to conduct research and quality improvement, it is an excellent way to grow our esprit de corps.

BUILDING THE FUTURE

Building the future of medicine is no small order, but GIM remains up for the task. This year, GIM differentiated ourselves by adding APP training to our portfolio. The APP Fellowship helps new graduates build a strong foundation in caring for medically complex patients in the ambulatory setting. In addition to APP training, GIM hosted over 40 medical students in Foundations of Doctoring or Ambulatory Clerkship rotations. And provided continuity clinics for 60 categorical residents. And hosted 35 Primary Care residents and interns. All told, GIMers provided education, training, mentorship, and inspiration to 139 future health professionals. All in a day's work.

FACE-TO-FACE CARE

Our patients, families, and caregivers are the reason our faculty work so hard every day to deliver the best care available. This year was no exception. GIM practices provided 3,000 more face-to-face visits in 2018 - with most practices achieving their highest number of visits to date. This reflects the hard work of the excellent teams at each clinic. What is not reflected in these numbers is the breadth and depth of care that is provided in each individual visit. Our faculty and staff’s commitment to high-value, whole-person care, is another reason we are proud to be GIM.

CAMPUS CONNECTIONS

GIM's connections reach far beyond the walls of the Division and our clinics. GIM is privileged to be the home division to leaders of several innovative programs, including: the Center for Women’s Health Research, the Center for Bioethics and Humanities, and D2V. The close proximity to these high-performing teams creates opportunities for collaboration and networking. Last year, GIM also launched into a new kind of networking; social media! Now, faculty, staff, students, alumni, fellow campus departments and programs, as well as community members, can follow, 'like,' and share all of the amazing work we are doing.

2019 PRIORITIES

- STRATEGIC PLANNING PROJECT

- BUILDING HIGH FUNCTIONING TEAMS

- DIFFERENTIATE OURSELVES

- FUNDING DISCOVERY

- PUBLICATIONS

- BUILDING THE FUTURE

- FACE-TO-FACE CARE

- CAMPUS CONNECTIONS

- 2019 PRIORITIES
