Adolescent Medicine

- Provide care for adolescent and young adult patients with acute physical and mental health issues.

- Provide care for adolescent and young adult patients with chronic medical problems and complex health conditions, including those requiring interdisciplinary care (e.g. those with eating disorders, mental health disorders, obesity, HIV and special health care needs).

- Provide primary and preventive care, diagnosis, and management for conditions specific to adolescent and young adult populations, including growth and development, reproductive, gynecologic and sexual health issues, substance abuse, musculoskeletal problems, behavior and mental health problems, and nutrition.

- Facilitate the patient self-management skills necessary for successful transition to adult care settings, in healthy adolescents and young adults as well as those with special health care needs.
