Hematology, Oncology & BMT Fellowship

Overview

The goal of the Pediatric Hematology, Oncology and Bone Marrow Transplantation (BMT) Fellowship Program is to train fellows in the scientific and clinical aspects of the discipline, preparing them for a career in academic medicine. Paramount throughout training is the emphasis on excellence of clinical care for children with hematologic or malignant disorders and those requiring bone marrow transplantation. Emphasis is on the development of fellows in the physician-scientist model, for which there are numerous role models among the faculty.

During the fellowship, each fellow is expected to acquire clinical expertise and the procedural skills required for diagnosis and treatment of Hematology, Oncology and BMT patients. Of equal importance, each fellow is expected to select a research mentor, and under the guidance of that individual to develop research skills, specifically learning the methods of careful, controlled scientific inquiry. The fellowship is designed as a three-year training program, with a clinical emphasis during the first year and a research emphasis in the latter two years. The fellowship is accredited by the Accreditation Council of Graduate Medical Education.
