July 2018

Dear Urology Residency Applicant:

Thank you for your interest in our Urology Residency Training Program at the University of Colorado School of Medicine. Applications to our program are ONLY accepted through the Electronic Residency Application Service (ERAS). The deadline to submit applications to our residency training program is SEPTEMBER 15, 2018. Please browse the Association of American Medical Colleges website (www.aamc.org/eras) for specific information on ERAS dates and submission procedures.

Attached you will find basic information regarding our training program along with a description of our program's educational goals and a synopsis of our various conferences. Please feel free to browse our website at www.urology.cusurgery.com for additional information.

Subsequent to the application deadline and the internal review processing of all applications, selected applicants will be notified and scheduled for interviews in October / November 2018.

Please note that the University of Colorado Urology Program is #15573. Furthermore, all applicants must enter the American Urological Association (AUA) Urology Match to be considered. Please browse the AUA website (www.auanet.org) for specific details on the AUA Urology Match requirements.

If you have any questions, please feel free to contact our Residency Program Coordinator, Beth Musser, via e-mail at 'beth.musser@ucdenver.edu'.

Sincerely,

[Signature]

Randall B. Meacham, M.D.
Residency Program Director
Professor and Chief
Division of Urology, Department of Surgery
University of Colorado School of Medicine
UROLOGY RESIDENCY TRAINING PROGRAM
THE DIVISION OF UROLOGY
UNIVERSITY OF COLORADO SCHOOL OF MEDICINE

PROGRAM OUTLINE
Status:     Full Accreditation

2018-2019 Program Structure
Length of Training:    48 Months
Maximum Number of Residents:  12
Approved Residents per Level:  3-3-3-3
2018-2019 Residents per Level:  3-3-3-2

2019-2020 Program Structure
Length of Training:    60 Months (per July 2019 RRC requirements)
Maximum Number of Residents:  15 (with PGY-1s enrolled in program)
Approved Residents per Level:  3-3-3-3-3
2019-2020 Residents per Level:  3-3-3-3-3

In July 2019 the revised ACGME Program Requirements for Graduate Medical Education in Urology specify that all Urology training programs be 60 months in duration. There will no longer be a requirement for applicants to complete pre-requisite training in a General Surgery program. All training will be conducted through Urology programs. Applicants who match into our program through the January 2019 AUA Match will begin training in our program on June 23, 2019 with an expected completion date of June 30, 2024 and will then be board eligible with the American Board of Urology.

ERAS
The Division of Urology Residency Program at the University of Colorado School of Medicine ONLY accepts applications through the Electronic Residency Application Service (ERAS). Deadline for applications is September 15, 2018. Please check the American Association of Medical Colleges Website (www.aamc.org) for additional information regarding the ERAS program.
**UROLOGY RESIDENCY TRAINING PROGRAM**  
(Continued)

**AMERICAN UROLOGICAL ASSOCIATION MATCH**  
All applicants must enter the American Urological Association (AUA) Urology Match to be considered. Please browse the AUA website (www.auanet.org) for specific details on the AUA Urology Match requirements.

**Website**  
Information regarding the residency training program can be viewed on our website at [www.urology.cusurgery.com](http://www.urology.cusurgery.com). For information on the University of Colorado School of Medicine (UCSOM) and/or the Office of Graduate Medical Education, please visit our institutional website at ‘www.ucdenver.edu’.

**RESIDENT ELIGIBILITY**  
To be considered eligible for a training program at the University of Colorado School of Medicine, the following minimum eligibility requirements for selection must be met:

1. Graduation from a medical school in the United States or Canada accredited by the Liaison Committee on Medical Education (LCME); or
2. Graduation from any college of Osteopathic Medicine in the U.S. accredited by the American Osteopathic Association (AOA); or
3. Graduation from medical school outside of the United States or Canada and meeting one of the following additional qualifications:
   a. Holds a currently valid certificate from the Educational Commission for Foreign Medical Graduates (ECFMG) prior to appointment; or
   b. Holds a full and unrestricted license to practice medicine in Colorado; or
   c. Has graduated from a medical school outside the United States and completion of a Fifth Pathway Program provided by an LCME – accredited medical school.
4. Residents in our program must be a U.S. citizen, lawful permanent resident, refugee, asylee, or otherwise possess or be able to obtain prior to the start date the appropriate documentation to allow resident to legally train at the University of Colorado School of Medicine.
5. Applicants must be eligible for either a training certificate or a permanent medical license as granted by the Colorado Medical Board.

Selection from among eligible applicants is based on residency program-related criteria such as ability, aptitude, academic credentials, communication skills, and personal qualities such as motivation and integrity, as well as the ability to function within the parameters expected of a practitioner in the specialty.  

The Division of Urology does not set a minimum USMLE/COMLEX score as criteria for reviewing applications and/or the selection of applicants.
EDUCATIONAL PHILOSOPHY
The educational philosophy of the department is to provide the best possible resident training in urology. To achieve this, the goals for urology resident training are:

A. To provide adequate volume and variety of surgical experience in general urology and the various urologic subspecialties. This includes urologic cancer, geriatric urology, urodynamics, female urology and neurourology, pediatric urology, infertility and impotence, erectile dysfunction, endourology and stone disease, laparoscopy, renovascular disease, infectious disease and genitourinary trauma.
B. To provide adequate ambulatory experience (outpatient clinical experience) in general urology and various urologic subspecialties as listed above.
C. To provide educational and research conferences to further enhance the training experience. These conferences will cover the basic sciences as they relate to urologic physiology and pathology, urologic imaging, combined morbidity and mortality conferences for all participating institutions, urological pathology, journal reviews, and other subjects having educational value in the basic and clinical domains of urology.

To meet the above listed goals of the urology residency training program, it is necessary for residents rotate at four (4) area hospitals (University of Colorado Hospital, Veterans Affairs Medical Center, Denver Health Medical Center and Childrens Hospital Colorado). Each hospital is unique and essential in providing the necessary volume and variety of cases for optimal resident training. Three of the hospitals are on the main campus while the fourth is approximately 8-miles away allowing for resident interaction and combined conference participation at least two (2) times per week.

The goals for urology resident education for each particular assignment are:
A. URO-1 - The objectives of the URO-1 year are to achieve a wide experience in the broad field of surgery, experience in pre-operative evaluation and post-operative care of all classes of surgical patients and to begin the development of technical surgical skills. The essentials of pre-operative and post-operative care include the recognition and treatment of surgical complications, fluid and electrolyte balance, wound care, and nutritional support. The intern performs supervised surgical procedures, gains expertise in vascular access, and other invasive procedures (e.g. tube thoracostomy, diagnostic peritoneal lavage, etc.). The intern also performs admission work-ups, writes pre and postoperative orders, progress notes and hospital discharge summaries. During the PGY-1 year, Urology interns will participate in six months of core surgical rotations designed to foster competence in basic surgical skills, the peri-operative care of surgical patients, and interdisciplinary patient care coordination (i.e. General Surgery, Vascular, Critical Care, and Trauma). The remaining six months of the PGY-1 year will be spent on Urology rotations.

B. URO-2 – The overall goals of the URO-2 rotation is to continue to provide the Resident a broad introduction to urologic practice. Although much will be learned on a one-to-one basis from the Urology Chief Residents, the junior resident participates in surgical procedures under the direct supervision of the urology faculty performing less complex surgical procedures in that setting. The junior resident also participates in the attendings'
UROLOGY RESIDENCY TRAINING PROGRAM
(Continued)

URO-2 (Continued) clinics to learn how faculty members manage complex urologic problems. In addition, residents are exposed to “bread and butter” pediatrics as well as unique and complicated diagnostic and treatment challenges.

C. URO-3 – The URO-3 rotation for the urology resident provides the opportunity to refine clinical and surgical skills in adult urology and to perform ESWL at the Kidney Stone Center. A portion of this rotation is set-aside for the resident to learn investigative urology. Although a clinical project may be pursued during this rotation, the resident is encouraged to gain hands-on experience in one of the Urology research laboratories.

D. URO-4 – The overall goal during the URO-4 rotation is to become comfortable as the primary urologic surgeon. The resident should be prepared for every adult and pediatric case and, prior to the case, know and understand all of the major steps required to perform any procedure. In addition, he/she should be able to discuss all surgical options and complications as well as their management. The resident is also expected to learn how to perform as first assist during major open procedures. In addition, the resident will be responsible for patient care, evaluation of outpatients in the clinics, and the emergency evaluation of patients in the Emergency Department or Medical Surgical Specialties Clinic under the direct supervision of the urologic faculty.

E. URO-5 – The URO-5 residents are the Chief Residents in Urology. In close consultation with the Residency Program Director, the Chief Residents assume significant responsibility for coordinating the residency program; i.e. organizing the conferences, teaching the other residents and medical students both didactic and surgical technique and passing on his/her experience to the junior residents. The chief resident is also responsible for coverage / assistance of all major surgical procedures as well as assisting in clinics whenever the schedule allows. At the Veteran’s Administration Medical Center, the chief resident is responsible for running all outpatient clinics under the supervision of the urologic faculty. Upon completion of the URO-5 training year, the resident will be able to perform complicated major urologic surgeries competently.

COURSES / EDUCATIONAL MEETINGS
The residents are exposed to a variety of post-graduate courses and educational meetings during their training. Residents and faculty attend regional meetings of the Rocky Mountain Urological Society which host visiting professors from across the country. Residents are encouraged to submit abstracts for presentation at the South Central Section meetings as well as the annual meetings of the American Urological Association. In addition, all junior residents are required to attend the annual AUA Fundamentals of Urology course.

PRESENTATIONS
The residents have regularly presented the results of their research in both regional and national forums. Each annual meeting of the American Urological Association (AUA) and South Central Section of the AUA (SCS) have included presentations on the work of our residents. In addition, residents have presented at other such prestigious national meetings
as the American Society for Reproductive Medicine, the American Association of Pediatrics and the Society for Urodynamics, Female Pelvic Medicine and Urogenital Reconstruction.

VISITING PROFESSORS
The Division of Urology hosts visiting professors who are drawn from the ranks of the premier educators in the specialty and various sub-specialties of Urology. Visiting Professors conduct informal case discussions, basic science reviews and prepared lectures with the residents, students, and faculty.

CONFERENCES
Textbook Review and Basic Science Discussion – The purpose of this conference is to review in detail the contents of the major urologic teaching texts (i.e. Campbell-Walsh Urology, AUA Guidelines) with a detailed interactive discussion of clinical and basic science issues. The chief resident is responsible for establishing the schedule of this conference in consultation with the Residency Program Director. Succinctly stated, the intent of this conference is to cover the most relevant portions of Campbell-Walsh Urology on a bi-annual basis. Additionally, selected chapters / guidelines may be introduced from other standard urology educational materials if it is felt that this will provide a superior educational experience.

Uroradiology / Uropathology Conference - Once per month, the residents and faculty participate in a Uroradiology / Pathology Conference conducted at The Children’s Hospital. Participating faculty for these meetings are from the Division of Urology, the Department of Radiology, and the Department of Pathology. During these conferences, the residents present and discuss actual clinical scenarios and the associated radiographs and histology slides are reviewed. This conference is held in an interactive format with individual residents discussing the cases under the guidance of the faculty.

Grand Rounds
A. Journal Club – The Administrative Chief Resident is responsible for obtaining a list of appropriate journal articles from the faculty, organizing the articles, and distributing the list to the other residents. Individual residents are required to have read all of the articles and be prepared to discuss them. Residents are further required to evaluate statistical and investigative techniques as well as summarize the most relevant information contained within the article. Faculty members attend Journal Club and provide comments and discussion of the articles as well as a critique of the residents’ review of the subject matter.

B. Morbidity and Mortality (M&M) – An individual faculty member is assigned to moderate each monthly Morbidity and Mortality Conference with participation of all division faculty members. The residents are responsible for accumulating the data regarding the cases performed at their individual institutions during the preceding month as well as providing a detailed description of all complications and deaths. A resident who participated on the case to be reviewed presents the pertinent details of the procedure as well as the learning points. Through discussion of all members present, the group constructs an approach for the minimizing the potential for future complications of this type. Additionally, the moderating faculty member is responsible for inviting authorities from other disciplines to participate in
the conference and provide commentary on the specific cases discussed.

Additionally, the Denver Health Medical Center and the Denver Veteran’s Administration Medical Center also have weekly M&M conferences that pertain specifically to the cases which presented in their respective institutions. These conferences are led by the respective Chiefs of Surgery and are attended by the residents assigned to the rotations for these specific institutions.

C. **Invited Presentations** – The Chief Resident is responsible for identifying a topic of special clinical or basic science significance each month and inviting an individual faculty member from this or other programs/institutions to make a presentation. The selection of topics and individual presenters is accomplished with input and advice from the Residency Program Director. Full time faculty attend these conferences and provide discussion during the course of and at the conclusion of the presentations.

D. **Resident / Faculty Presentations** – Grand Rounds are routinely set aside for a resident or faculty presentation. Each resident will present at one Grand Rounds per year on an assigned topic during each year of his/her training. Other weeks are set aside for faculty presentations on a topic related to their subspecialty practice.

E. **Case Presentation Conference** – The residents are responsible for identifying and organizing specific clinical presentations. During these presentations, appropriate radiographs are presented and interpreted by residents who were not previously familiar with the specific cases in question. Appropriate modalities and approaches to diagnosis and management are also discussed. Faculty members are responsible for monitoring and guiding the discussion at hand and for confirming the residents’ interpretation of the radiographs and clinical data.

F. **Uroradiology and Uropathology** – On a regular basis, a member of the faculty of the Urology and Radiology staff present Uroradiology or Uropathology Conference at Grand Rounds. This is in addition to the monthly Uroradiology conference held at The Children’s Hospital. During the course of this conference, a faculty member from radiology or pathology organizes individual case presentations with appropriate radiographs and histologic slides. These are projected and discussed by the residents. Full-time faculty members with the Division of Urology are in attendance and provide additional discussion during the course of the conference.

G. **Urinary Stone Treatment Conference** – Once per month residents and faculty attend a treatment discussion meeting at the Rocky Mountain Kidney Stone Center. The resident who is rotating at the Rocky Mountain Kidney Stone Center prepares a minimum of six clinical cases with including interpretation of radiographs. Other members of the resident staff then discuss these cases emphasizing diagnostic and treatment modalities. The entire treatment staff of the Rocky Mountain Kidney Stone Center critiques the presentation and discussion and offers additional insight.
**Second Opinion Conference (optional)** - Current urologic oncology cases are discussed on a weekly basis along with relevant radiological and pathological studies by a multi-specialty cancer care team.
