As part of a NIH training grant "Graduate Experiences for Multicultural Health Professional Students (GEMS) Short term internship research program", Dr. Sonia Flores is willing to support students for research projects this summer as part of the MSA program for MSI students.

Stipends are $700/week for 8 weeks. In order to apply for funding, submit an up-to-date MSA plan form by March 15th to Dr. Flores (Sonia.Flores@ucdenver.edu) or Dr. Adela Cota-Gomez (Adela.Cota-Gomez@ucdenver.edu). Priority will be given to applicants who are underrepresented minorities or students from disadvantaged backgrounds.

Research can be in many thematic areas, including basic sciences, clinical and public health. Applicants will be selected on the quality of the plan including the mentor's suitability and the project's overall impact on health care and medicine. Mentors should be faculty members at the University of Colorado.

Dr. Flores and Dr. Cota-Gomez anticipate being able to notify students of their acceptance by April 1st.
