Are you interested in participating in research about individuals with a dual diagnosis?

This study will look at both the financial and societal impact of having a family member with a dual diagnosis of a neurodevelopmental disorder (examples: autism, Down syndrome, fragile X syndrome, intellectual disability) **AND** a mental health diagnosis (examples: anxiety, depression, or bipolar disorder).

We are enrolling individuals
1) who have both a neurodevelopmental diagnosis AND a mental health diagnosis
2) who are between 8-65 years of age
3) who have used 911 or an Emergency Department one or more times **for mental health reasons**
4) who have a parent or caregiver who is willing to complete in-depth interview relating to the enrolled individual's diagnoses and the associated incurred costs

Caregivers of enrolled individuals with a dual diagnosis will complete an in-depth interview. The interview may take up to 3 hours. Compensation will be provided.
