This book is a supplement to the Graduate Student Handbook prepared by the Graduate School. Students are responsible for familiarizing themselves with the content of both.
1. Admission to the Program
2. Student Support
3. Student Advising
4. Training Program
5. Academic Standards for Neuroscience Graduate Students
6. Other Neuroscience Program Events and Related Activities
7. Neuroscience Program Promotion and Recruitment Activities
8. Information for New Students

Director: Sukumar Vijayaraghavan, PhD
Administrator: Deanne Sylvester
Graduate Training Committee (GTC) Chair: Nathan Schoppa, PhD

Mailing Address:
Neuroscience Program, MS 8315, 12800 E. 19th Ave., Aurora, CO 80045
Phone: 303-724-3120

Campus Address:
RC1N, Room 7107, 12800 E. 19th Ave., Aurora, CO 80045

Web Address: http://www.ucdenver.edu/neuroscience/
1.0 Admission to the Program. Students seeking admission into the program should have an undergraduate degree or its equivalent and have taken the Graduate Record Examination (GRE). Foreign students must also take the Test of English as a Foreign Language (TOEFL). A baccalaureate degree in biological science, chemistry, physics, or engineering is recommended. Applicants are strongly encouraged to take an undergraduate level biochemistry course. Students will be more favorably viewed for admission if they have Graduate Record Examination percentiles of 65 or higher. There is no absolute requirement for grade point average above that required by the graduate school, but successful applicants generally have GPAs above 3.2 (A=4.0). Undergraduate research experience is strongly recommended. Students with deficiencies may be admitted on probation, but these must be rectified during the first year. It is the continuing policy and commitment of the Graduate School of the University of Colorado to provide equal opportunity for qualified students without discrimination with regard to race, color, sex, religion, age, national origin or disability and to welcome such students to make application for admission to its graduate programs.

2.0 Student Support. Students accepted in the Ph.D. program are provided full tuition, health insurance, and a stipend of $30,000 per year for living expenses (for the 2018-2019 academic year). Continued support is contingent upon satisfactory academic and research performance by the student. When a student enters a thesis lab, the thesis mentor assumes complete responsibility for the student's stipend, tuition, fees, and associated research costs. Out of state tuition is paid only in the first year. All students must establish Colorado residency during and by the end of their first year in the program.

3.0 Graduate Training Committee (GTC). Every first year student is assigned a member of the GTC as a mentor. First-year students are required to meet with their GTC mentors approximately every month to update them on their progress. GTC members provide feedback to first year students on choices of rotation and thesis labs. The students also need to rehearse their rotation talks with their GTC advisors. In subsequent years, each GTC mentor will regularly, but less frequently, meet with his/her student group, which includes students from various thesis years. The GTC committee regularly monitors student progress and helps them resolve any problems that arise. The GTC Chair also acts as a liaison between the students, advisors and thesis committees in order to address, proactively, any scientific or interpersonal issues that might arise during the student’s tenure.

4.0 Training Program. The program’s goal is to provide a broad and solid foundation of understanding in neuroscience, and to train critical thinkers, who identify important problems, generate experimentally testable hypotheses, and who draw significant conclusions from results of their ongoing research in a specific area of neuroscience. In addition, we aim to foster development of students who approach research in a responsible, ethical, and professional manner. After the initial period of coursework, students choose their specialty fields from a diverse list of topics. They proceed with research in their specialty areas until the generation and defense of a thesis leads to the award of a Ph.D. in Neuroscience.

There are three tracks for entrance into the Neuroscience Program: some students enter directly into the NSP (neuroscience track), while others transfer from Biomedical Sciences Program (BSP track) or Medical Scientist Training Program (MSTP track). The year by year curriculum for students who enter the Neuroscience Program directly, is discussed in the following sections. Subsequently, the differences in training for those students who join the NSP through the BSP and MSTP tracks are outlined in section 4.4.

4.1 YEAR 1: Coursework, Laboratory Rotations and Preliminary Exam.

4.1.1 Required Coursework for Year 1.

FALL SEMESTER
IDPT 7806, Biomedical Sciences Core, 6 units
Course Directors: Variable.

NRSC 7501- Introduction to Neuroscience, 1 unit
Course Director: Dr. Sukumar Vijayaraghavan

NRSC 7600 Cellular and Molecular Neurobiology, 3 units
Course Director: Dr. William Sather and Chris Ford
Covers how nerve cells go about their business of transmitting signals.

**NRSC 7650 Research in Neuroscience (Lab. Rotations I and II), 2 unit each**
*Coordinated by the Graduate Training Committee, Dr. Nathan Schoppa, Chair*
Students will perform research in the laboratory of one of the faculty members of the program. The rotation will be followed by an oral presentation. Each rotation will occupy approximately 12 weeks. Rotation II will begin near the end of the fall semester (in November) and end early in the spring semester (in February).

**NRSC 7662 Neuroscience Seminar, 1 unit**
Seminar Committee Co-Chair: Dr’s. Sue Kinnamon and Abby Person
Seminar series designed to present recent important findings in Neuroscience research. Different topics are presented weekly by Neuroscience Training Program faculty, students and visiting faculty. **First year students are required to attend all the seminars and lunches with visiting faculty** and all other students are strongly encouraged to attend at least ½ of all seminars. The GTC monitors the attendance of first year students. Final grade is based upon attendance and participation at these seminars.

**SPRING SEMESTER**
**NRSC 7610 Fundamentals of Neurobiology, 3 units**
Course Directors: Drs. Molly Huntsman and Diego Restrepo
Lecture, laboratories and manuscript discussions to provide basic knowledge of the structure and function of the nervous system.

**NRSC 7615 Developmental Neurobiology, 3 units**
Course Director: Dr. Emily Bates
Course will cover topics in the development of the nervous system, such as neuronal birth, migration, differentiation, and death, axonal path finding, cell-cell recognition, and synapse formation, modulation and elimination. Part of the course is devoted to the discussion of original literature in the field.

**NRSC 7661 Grant Writing Workshop, 1 unit**
Course Director: Dr. Dan Tollin
A practicum in how to read and write a grant proposal with emphasis on the NRSA pre and post-doctoral fellowship applications.

**NRSC 7662 Neuroscience Seminar, 1 unit**
Seminar Committee Chair: Dr’s. Sue Kinnamon and Abby Person
Seminar series designed to present recent important findings in Neuroscience research. Different topics are presented weekly by Neuroscience Training Program faculty, students and visiting faculty. **First year students are required to attend all the seminars and lunches with visiting faculty** and all other students are strongly encouraged to attend on a regular basis (at 50% of all seminars). The GTC monitors the attendance of first year students. Final grade is based upon attendance and participation at these seminars.

**NRSC 7650 Research in Neuroscience (Lab. Rotation III), 2 unit**
*Coordinated by the Graduate Training Committee, Dr. Nathan Schoppa, Chair.*
Students will perform research in the laboratory of one of the faculty members of the program. The rotation will be followed by an oral presentation.

**4.1.2 Laboratory Rotations in the First Year.** Rotations serve several important purposes. First, they enable the student to explore and compare several areas of neuroscience research and aid in the choice of a mentor and project for thesis work. Second, rotation seminars provide intense training in the craft and art of public presentation, an essential aspect of future career success. Third, they allow program faculty to evaluate the motivation and intellectual preparedness of students to undertake independent research.

**4.1.2.1 Number of Rotations.** **Students must perform 3 rotations, each ~12 weeks in duration, before the start of their second year.** Students will start their first rotation in the Fall Semester of year one. MSTP students take two rotations (during the summers after the first and second year of Medical School).
4.1.2.2 Choice of Mentor/Laboratory. First and foremost, students should choose laboratories and projects that are reasonable possibilities for a student’s thesis work. Students should avoid rotations whose main goal is the acquisition of new techniques; there will be plenty of opportunity to learn methods informally among the Program laboratories as the need arises. Students are strongly advised to choose rotations that maximize their exposure to different areas in Neuroscience. They should talk to their GTC mentors or the GTC Chair prior to making rotation decisions. Students should be aware that mentors and their groups put considerable effort into supervision of rotating students. Thus, some faculty may be reluctant to take on a rotation student if they have extensive travel plans, teaching, grant writing, or if their funding is in jeopardy. In addition, the Program allows only a single neuroscience rotation student in a lab at any time. For these reasons, it is imperative that students arrange for rotations as far in advance as possible.

4.1.2.3 Limitations on the number of rotation students/lab. In order to ensure adequate supervision, a faculty member is allowed to take only one Neuroscience Program Student/ Rotation cycle.

4.1.2.4 Rotation initiation form. Students must fill out a rotation initiation form and have it signed by the before the beginning of the rotation period. Forms are provided and received by the program administrator.

4.1.2.5 Duration of Rotation. All rotations will span a period of 12 weeks. The dates for the post-rotational talks will be decided by the Graduate Training Committee and are posted on the Neuroscience web site (http://www.ucdenver.edu/neuroscience under “seminars”). Ability to organize and perform experimental work given normal schedule constraints is an important part of the evaluation process for these rotations. Further, it is our experience that seminar performance difficulties arise when a student delays a presentation too long after the actual rotation. The GTC, in conjunction with the Seminar Committee, will assign the date for the rotation seminar. No extensions to the duration of laboratory work or changes to the previously assigned seminar date will be given, except in exceptional circumstances (e.g. severe illness). In this regard, it may help to view the rotation as a normal course with a final exam (i.e. the rotation seminar).

4.1.2.6 Performance Expectations and Grading Policies for Rotations. Given the unpredictable nature of scientific progress, it is not expected or required that students complete all goals proposed at the start of their rotations. However, rotation projects should be thoughtfully designed in consultation with the mentor so that a reasonable prospect for scientific progress exists. In any case, students are expected to spend significant effort toward achieving their goals, or if progress is difficult, to be able to explain the nature of the problems involved.

4.1.2.7 Effort. While first year students have a substantial course load, the program expects that sufficient time will be devoted to the rotation project. For professionals in training, it is not appropriate to require a minimum number of hours for rotation work. Strong self-motivation is an essential characteristic for an independent scientist, and we expect our students to demonstrate this quality throughout their training. In this regard, students should expect to be in the lab beyond the normal working hours, i.e., at evening, on weekends, and possibly over vacation days during the term. This commitment of time is especially important when long, complex experiments are being done. A major part of the mentor’s rotational assessment (as well as his/her willingness to accept a student) will be based on the degree and quality of lab effort. Students should always discuss time off and/or vacation days with their lab mentor in advance, both in their lab rotations and once they enter a thesis lab.

4.1.2.8 Rotation Seminar. At the end of the rotation the student will present a seminar. The purpose of the seminar is to provide intense training in the craft and art of public presentation, an essential aspect of future career success. Rotation seminars are typically 12 min in length, although the expected maximum duration can vary from year to year depending on the size of the first-year class. Each year, the GTC Chair will notify first-year students of the expected duration. The student will rehearse the seminar with their labs and with their GTC mentors prior to the public presentation.

4.1.2.9 Rotation Seminar Guidelines. The post-rotation talk is an essential component of the research rotation. Students are expected to present a well-organized, clear, and thoughtful presentation. Students should remember that they are addressing a general Neuroscience audience and avoid the
use of specialty-specific terminologies and jargon. Students should consider the following elements when designing their talk: **Introduction**-a short statement of the question or problem addressed by the rotation. **Background**-describe the significance of the question in broad terms for a diverse audience. Describe previous work and its relationship to the project. **Specific experimental aims**-what were the particular experimental goals proposed to address the hypothesis? **Methods and Design**-explain any unusual strategies or techniques employed. **Results and Conclusions**-the results should be presented in a straightforward and logical manner. Wherever possible, graphs and cartoons should replace excessive verbiage on slides. **Conclusions** should be summarized briefly. **Future directions**-at the end of the talk, the student should provide a brief summary of results and how, in the students’ opinion they should be followed upon.

**4.1.2.10 Suggestions for Effective Talks.** 1. Avoid reading or memorizing your presentation, if at all possible. Wooden, canned deliveries are dull and very hard for audiences to follow. 2 Prepare and use simple, effective visual aids. Remember that effective communication of data and ideas is your goal! Do not spend undue effort on fancy multicolored slides (especially for text) if color is not required to simplify complex data or concepts. Keep text very brief and do not read directly from the screen (audiences are much faster at reading silently!). 3 Use the marker board when appropriate. Diagramming or outlining while you are talking is a highly effective means of explaining concepts difficult to describe with the spoken word. Use of the marker board can also help answer spontaneous questions from the audience. 4 Consider audience questions carefully. Both faculty and students are encouraged to ask questions during and after rotation seminars. A few of these questions may be intended to probe your understanding of your research rather than illuminate an area of confusion. Part of your evaluation will concern your effectiveness in responding to questions. Thus, make sure that you understand the question before answering. Repeat the question or ask for a rephrasing if you need to. Second, relax and take a moment of silence if you must before answering to formulate a coherent answer. Third, if after contemplation you don’t know the answer, don’t be afraid to say so. We all get stumped from time to time!

**4.1.2.11 Rotation Grading.** Final grades for rotations will be based on the evaluation of the lab rotation advisor. It is also very important that each student meet with their rotation advisor after their rotation talks to discuss strengths and weaknesses in performance during the rotation and suggestions for improvement. The rotation talks will also be independently evaluated by the GTC, with written feedback provided to each student by the GTC Chair. These evaluations from the GTC do not factor into the grading of the rotation but should be considered seriously by the students as they move forward. Students will be expected to show improvement to identified weaknesses in subsequent rotations and seminars. Failing a rotation (B minus or below) will be considered a serious academic deficiency that may require further action by the GTC (see Academic Standards).

**4.1.3 Transfer to Thesis Lab at End of First Year:** An important aim of the rotations is to enable the student to find a thesis mentor. After completion of the three rotations for regular graduate students (or two rotations for MSTP) the student should come to a mutual agreement with a faculty member to act as thesis mentor. **Feedback from the GTC mentor or Chair is essential to this process.** The chair of the GTC and the Program Administrator should be notified on the choice of mentor on or before June 15th of the first year. Official transfer to the thesis lab takes place on July 1st. Under exceptional circumstances and at the discretion of the GTC Chair, a student may be allowed to perform an additional rotation for the express purpose of enhancing the mentor selection process. The Graduate Training Committee must formally approve the choice of thesis lab. The student and faculty member together plan a thesis project. Doctoral level work requires a close collaboration with a faculty mentor. It is the responsibility of the student to establish and maintain that relationship. Continuation in the PhD program depends upon identifying a mutually agreeable thesis laboratory.

**4.1.4 Preliminary Exam at the End of the First Year:** The preliminary exam will be both written and oral. The written portion will be given to students to complete a few weeks before the oral exam. An examining committee will be drawn from the course lecturers of NRSC 7600, 7610 and 7615 (see section on first year courses). Each of these courses will have one representative on a student’s exam committee. The exam will last about 45 -60 min. While the basis of the questions will be integration of material across the courses, the examiners will expand the scope based on perceived strengths and weaknesses of the student. If a student demonstrates appropriate knowledge and integration of the material, no other action is
required. However, if deficiencies are noted during the exam, the student will develop a plan to address these weaknesses in consultation with the GTC Chair. In some cases, reexamination might be required. In all cases, problems noted during the exam should be addressed by the end of the fall semester of the second year.

SUMMER TERM-end of first/second year
NRSC 8990 Research in Neuroscience (all students), 1 unit (Required)
Course Director: Dr. Sukumar Vijayaraghavan

NRSC: 7657- MATLAB for Neuroscientists , 1 unit. (Required in summer of year 1 or 2)
Course Directors: Dr. John Thompson and Prof. Diego Restrepo
The course is a hands-on programming course that takes students through various aspects of MatLab programming.

4.2 YEAR 2: Coursework, Pre-Thesis Research and the Comprehensive Examination.

Mandatory course requirements for second year onwards apply to the NSP students as well as MSTP and BSP students. These are

1) Quantitative approaches to Neuroscience. This requirement is satisfied by taking one of the following courses a) NRSC 7674 – Quantitative Neuroscience b) BIOE 5053: Optics and Microscopy in Biomedical Research c) NRSC 7612- Nervous System Modelling with NEURON or d) any other future course designed to fulfill this requirement (check with GTC).

2) BIOS 6606 Statistics for Basic Scientists.

3) NRSC: 7657- MATLAB for Neuroscientists.

FALL SEMESTER
PHCL 7605 Ethics in Research, 1 unit (Required)
Course Director: Dr. Paula Hoffmann.
Course is designed to introduce issues around ethics of research, publication, and reviewing of manuscripts and grants.

NRSC 7674 Quantitative Neuroscience, 1 unit. (Can be taken in second or third year to fulfill requirement in quantitative approaches to Neuroscience; see above)
Course Director: Drs. Achim Klug and Tim Lei

BIOS 6606 Statistics for Basic Scientists, 3 units. (Can be taken in the fall of second or third years)
Course Director Kathleen Torkko.
This course provides an overview of applied statistics, probability, hypothesis testing, bootstrap methods, permutation tests, nonparametric methods, regression analyses and analysis of variance.

NRSC 7650 section OV3 Research in Neuroscience (Pre-comps), 1-5 units (Required)
Course Director: Dr. Sukumar Vijayaraghavan
Laboratory research with Neuroscience Training Program faculty.

NRSC 7670 Advanced Topics in Neuroscience*, 1 unit (when offered)
Course Director: Dr. Sukumar Vijayaraghavan
Course will focus on specific topics each semester.

SPRING SEMESTER
NRSC 7650 section OV3 Research in Neuroscience (Pre-comps), 1-5 units Required
Course Director: Dr. Sukumar Vijayaraghavan

NRSC 7670 Advanced Topics in Neuroscience*, 1 unit (when offered)
Course Director: Dr. Sukumar Vijayaraghavan  
Course will focus on specific topics each semester.

**BIOE 5053: Optics and Microscopy in Biomedical Research (3 units)**  
Course Director: Dr. Emily Gibson

**NRSC 7612: Nervous System Modelling with NEURON**  
Course Director: Dr. Alon Poleg-Polsky.

**SUMMER SEMESTER, 1 unit**

**NRSC: 7657 - MATLAB for Neuroscientists , 1 unit. (Required for those who did not take it at the end of the first year)**  
Course Directors: Dr. John Thompson and Prof. Diego Restrepo  
The course is a hands-on programming course that takes students through various aspects of MatLab programming.

**4.2.2 Thesis Proposal Form.** Before the end of the fall semester in the second year the student should submit to the GTC Chair a Student Thesis Proposal form signed by both the student and the thesis advisor, and attach a brief one-page overview of the proposed thesis research. This overview should include a paragraph of background and significance, a clearly stated hypothesis to be tested and at least two specific aims, each supported by one or two sentences describing the experimental approach.

**4.2.3 Comprehensive Exam.** At the beginning of the second year of study Neuroscience graduate students will begin preparing for the Comprehensive Exam. It is highly recommended that the student carefully read the Graduate Student Handbook on Comprehensive Examination policies and deadlines, and pick up a packet of instructions and forms from the Graduate School well ahead of the planned examination so all required paperwork can be completed on time. Complete paperwork must be submitted to the Graduate School no later than two weeks prior to the examination date. Please make copies for the Neuroscience Program to be placed in your official file. Official forms can be found on the Graduate School [http://www.ucdenver.edu/academics/colleges/graduate-school/Pages/default.aspx](http://www.ucdenver.edu/academics/colleges/graduate-school/Pages/default.aspx). Note: A student must be registered at the time he/she takes the Comprehensive Examination. Students should take the Graduate School Comprehensive Examination for admission to candidacy for the Neuroscience Ph.D. before the end of their third year. The Comprehensive Examination Committee shall consist of a minimum of five Graduate Faculty members. At least one of the members must be outside the Program’s core training faculty. The majority of the members, including the chair, must be from the core training faculty of the Neuroscience Program. The student’s dissertation advisor may not chair the examination committee. The student should provide the GTC with the names of seven potential committee members and discuss with the GTC Chair the committee's composition. The GTC and the Graduate School must approve the Thesis Committee composition prior to scheduling the examination. The examination will have as its focus a thesis research proposal written by the student using the format of a NIH grant application. Although preliminary data collected by the student is helpful, it is not essential for the proposal. The written proposal should not exceed ten pages (excluding references) and be distributed to the Comprehensive Examination Committee at least two weeks prior to the examination. The student must adequately demonstrate the scientific knowledge and ability to defend this proposal, as well as satisfying the overall requirements for the examination as set forth in the AMC Graduate Student Handbook. The examination will consist of a 30-45 minute seminar by the student to the program, general questions from the audience, and then a closed exam with the Comprehensive Examination Committee. As stated in the graduate student handbook, the comprehensive examination “will test your mastery of a broad field of knowledge, not merely the formal course work completed.” The student should consult with his or her committee members prior to the exam as to the subject areas each member expects the student to have mastered.  
*Once a student has passed the Comprehensive Exam, he/she should register for Neuroscience Doctoral Research (NRSC 8990) instead of NRSC 7650.*
4.3 YEAR 3 and Beyond

4.3.1 Coursework

Quantitative approaches to Neuroscience (if not taken in the second year, see above).

BIOS 6606 Statistics for Basic Scientists, 3 units. (Required unless already taken in the second year)
Course Director Kathleen Torkko.
This course provides an overview of applied statistics, probability, hypothesis testing, bootstrap methods, permutation tests, nonparametric methods, regression analyses and analysis of variance.

NRSC 8990: Neuroscience Doctoral Research, 1-10 units (Required; Summer, Fall, and Spring)
Course Director: Dr. Sukumar Vijayaraghavan
Students will generate an original body of research that constitutes a significant contribution to the field of neuroscience. Suitability of thesis research is judged by the Thesis Committee. Students write a Ph.D. thesis and defend the document at an oral examination.

4.3.2 Ph.D. Thesis. After passing the Comprehensive Proposal, the student enters Ph.D. candidacy. During the following years the students perform research towards a thesis defense. Students will give annual reports on the progress of their thesis research to the Neuroscience faculty in the form of 30-minute seminars, and meet at least bi-annually with their Thesis Committee. The Chairman of the Thesis Committee will meet with the GTC to discuss the student's progress and will submit a brief written summary of the outcome of each meeting with the student. Upon completion of a body of original research that constitutes a significant contribution of new knowledge to the field of Neuroscience, students will write a Ph.D. thesis containing this information, and defend this document at an oral examination scheduled by the Graduate School. A student will not be allowed to defend the thesis unless s/he has submitted for publication at least one first author research manuscript. The student will submit a detailed description of his/her thesis to the thesis committee six weeks prior to the anticipated date of defense. The committee will then have two weeks to let the student know if he/she can go ahead with the oral defense. The student may defend in the face of the thesis committee’s disapproval, provided he/she knows the risks involved. Check with the Graduate School for current deadlines, thesis format requirements and required paperwork prior to writing the thesis and scheduling the defense. (Students must be registered in NRSC 8990 to defend.)

4.4 Curriculum for BSP and MSTP Track Students

BSP students will take the Biomedical Sciences Core Course in the fall semester of the first year. They will be asked to take, in addition, a total of at least 5 credits of Neuroscience Courses before their Comprehensive exam. The 5 credits can be obtained by taking any combination of the following courses:

NRSC 7501: Introduction to Neuroscience (1 credit).
NRSC 7600: Cellular and Molecular Neurobiology (3 credits, fall).
NRSC 7610: Fundamental Neurobiology (3 credits, January-March).
NRSC 7615: Developmental Neurobiology (3 credits, spring semester).
NRSC 7670: Advanced Topics in Neuroscience (1 credit).

MSTP students need only take 2 credits from the above courses (3 credits of the 5-credit requirement are carried from the first-year medical school neuroscience block)

It should be noted that neither BIOS 6606 (Statistics for Basic Scientists) nor any course taken to fulfill the requirement in quantitative neuroscience (e.g., NRSC 7674) can be applied to the 5-credit requirement. BIOS 6606 as well as a quantitative neuroscience course must be taken by BSP and MSTP Track students (see above).

The ultimate decision on courses should be made following consultation with the GTC, which will consider factors such as the thesis lab that a student is joining and gaps in prior studies. Both BSP and MSTP students need to pass any program-specific Preliminary Exam, in order to be eligible to transfer into the Neuroscience program.
5. **Academic Standards for Neuroscience Graduate Students.** Applicants to the Graduate Program in Neuroscience are highly screened and rigorously evaluated for their potential to become creative and independent scientists. This means that each student in the Program was admitted with the Faculty’s full confidence in their ability to complete training requirements for the Ph.D. Thus, the Program does not operate to weed out students during training. Rather, we regard any dismissal or withdrawal as a serious detriment to the success of our program, and a situation that we will do our best to avoid. However, it infrequently happens that a student will fail to satisfy the Program standards and expectation for academic performance. Given the importance and intensely competitive nature of biomedical research, as well as our commitment to the future of our students, such instances invoke serious concern from the Program. Students should be assured that in an initial instance of failure the Program will do its best to help the student to remediate failure. However, multiple deficiencies indicate a poor prognosis for future success and demand close examination of a student’s tenure in the Program.

The GTC is charged with maintaining the academic standards and with evaluating the ability of students to continue with the training in cases of failure. The Academic Standards of the Program are described below, as well as the procedures used by the GTC to deal with performance deficiencies.

### 5.1 General Graduate School Standards

The minimal standards of the Graduate School must be satisfied. These are:
1. Maintenance of a 3.0 GPA at all times. Less than a 3.0 cumulative GPA puts the student on a two-semester probation. During this time, the student must raise the overall GPA to 3.0 while achieving a 3.0 GPA for each probationary term. Failure to satisfy this requirement may result in dismissal from the Program.
2. Passing grade on the Comprehensive Exam. A grade of “Fail” on either the Comprehensive or Dissertation Defense exams results in dismissal.

### 5.2 Additional Standards for Neuroscience Graduate Students

1. Students must achieve grades of B or better in each required course in Neuroscience. **Grades of B minus or lower are failing for Neuroscience courses.**
2. Students must achieve grades of B minus or better in all other core courses (currently Basic Science Core Course). Grades less than B minus are failing.
3. A student must not receive more than one failing grade for all required courses during the entire training program. In order to continue in the program, a student must demonstrate adequate integration of the first year rotations and course material during the Oral Preliminary Exam and/or any required follow-up.
4. Remedial and Disciplinary Actions. Failure to satisfy these conditions will result in a thorough review of the student’s entire performance in the Program, with a recommendation for dismissal a possible outcome. A single failing grade of B minus or below in a course may be remediated at the discretion of the GTC, in accordance with conditions developed in consultation with the course director. Usually this will consist of independent study by the student followed by a make-up exam. A lower grade than a C or the unavailability of satisfactory means of remediation will absolutely require the student to retake the course. In the case of remediation, no change of grade will be given. However, the student must achieve a passing grade (B or better) for any make-up exam. In addition, the course cannot be retaken if the student fails the make-up exam. Failure to remediate a course successfully, or to pass a course on the second attempt, will likely be cause for a recommendation of dismissal by the GTC to the Graduate School. Unsatisfactory progress in dissertation work is cause for serious concern for the GTC. The Thesis Committee for each student, which meets with the student and mentor every six months, will assess progress. Students are also strongly urged to meet informally with their committee members often to apprise them of progress made and discuss problems. If the Thesis Committee deems progress inadequate, the GTC will meet with the student, mentor, and Thesis Committee to ascertain whether the student is capable of continuing in the program. A recommendation of dismissal is a possible outcome of these deliberations. If the student is allowed to proceed further, an additional unsatisfactory assessment of thesis work will be cause for a mandatory recommendation for dismissal to the Graduate School. Unsatisfactory progress in dissertation work is cause for serious concern for the GTC. The Thesis Committee for each student, which meets with the student and mentor every six months, will assess progress. Students are also strongly urged to meet informally with their committee members often to apprise them of progress made and discuss problems. Unsatisfactory progress in dissertation work is cause for serious concern for the GTC. The Thesis Committee for each student, which meets with the student and mentor every six months, will assess progress. Students are also strongly urged to meet informally with their committee members often to apprise them of progress made and discuss problems. If the Thesis Committee deems progress inadequate, the GTC will meet with the student, mentor, and Thesis Committee to ascertain whether the student is capable of continuing in the program. A recommendation of dismissal is a possible outcome of these deliberations. If the student is allowed to proceed further, an additional unsatisfactory assessment of thesis work will be cause for a mandatory recommendation for dismissal to the Graduate School. Unsatisfactory progress in dissertation work is cause for serious concern for the GTC. The Thesis Committee for each student, which meets with the student and mentor every six months, will assess progress. Students are also strongly urged to meet informally with their committee members often to apprise them of progress made and discuss problems. If the Thesis Committee deems progress inadequate, the GTC will meet with the student, mentor, and Thesis Committee to ascertain whether the student is capable of continuing in the program. A recommendation of dismissal is a possible outcome of these deliberations. If the student is allowed to proceed further, an additional unsatisfactory assessment of thesis work will be cause for a mandatory recommendation for dismissal to the Graduate School.
Continuing financial support by the Program is contingent on satisfactory academic progress as defined above. The Program and its faculty will normally support students on Graduate School probation or undertaking to correct academic deficiencies. However, support will automatically terminate 30 days after a recommendation of dismissal to the Graduate School.

5.4 Due Process.
A student will have 7 days to appeal any decision of the GTC that affects them. Such appeals must be in writing and delivered to the Program Office. The GTC will respond to appeals within 7 days of receipt. Students will be given the opportunity to meet in person with the GTC to discuss their appeal if they so desire.

5.5 Further Appeals. Unchallenged decisions or decisions after appeal to the GTC regarding the correction of academic deficiencies are final. Decisions regarding recommendation for dismissal to the Graduate School may be appealed to the Dean of Graduate Studies as described in the Graduate Student Handbook.

5.6 Illness or Personal Problems.
Students are encouraged to bring any problems that might affect their academic performance to the attention of any GTC member. This must be done as soon as possible, preferably before such problems result in academic difficulties.

6. Other Neuroscience Program Events and Related Activities

6.1 Neuroscience Seminar. During fall and spring semesters, first year Neuroscience students are expected to attend all Neuroscience seminars (NRSC 7662). In subsequent years, attendance at a minimum of 50% of the seminars is required. Speakers during the academic year include Neuroscience students, Neuroscience faculty, and numerous invited guest speakers from other institutions. Students will be invited to luncheons or discussion sessions with select speakers and are encouraged to take advantage of these opportunities to interact with top scientists from around the world (participation in speaker lunches is required for first-year students).

6.2 Neuroscience Annual Retreat. The Neuroscience Program holds an annual weekend retreat during the academic year to foster faculty-student interactions with lectures, poster sessions, and opportunities for informal discussions during meals and free time. The event provides an opportunity for faculty members to present brief overviews of the research being conducted in their labs, and for students to present posters showing their own research from lab rotations or thesis work. One visiting speaker from another institution is usually invited to give lectures. The Neuroscience Program covers the cost of the retreat for all Neuroscience students. Neuroscience faculty members may partially cover the retreat cost for themselves and must cover all costs for postdoctoral associates or other members of their labs who attend. Since time with family members may diminish the time available for interactions with faculty and students, the Neuroscience Program discourages family member attendance at this function.

6.3 Student Journal Club. There will be a regular student run journal club. All first years are required to attend and all senior students will attend at least ½ of the journal clubs. The journal club will be held on the day of the seminar and usually discusses a paper from the seminar speaker. The invited speaker will attend these journal clubs. This is an opportunity for students to not only discuss the work presented in the papers but also question the speaker on the genesis of the work presented.

6.4 Rocky Mountain Regional Neuroscience Group (RMRNG) and Front Range Neuroscience Group (FRNG). The RMRNG and FRNG are chapters of the Society for Neuroscience dedicated to promoting communication and interaction among area neuroscientists. The RMRNG is based in Denver and the FRNG is based in Fort Collins (CSU). You automatically are a member of the other group if you are a member of one. You do not have to be a member of the Society for Neuroscience in order to join the RMRNG or FRNG. Annual Neurosymposium are held in the spring and fall, including lectures by visiting speakers and members, a poster session, and evening banquet.

6.5 Opportunities for Student Research Presentations. The Neuroscience Program encourages students to present their research findings through various poster presentations throughout the year. The following is a list of student poster presentation opportunities and the approximate time of year each event is held:
7. Neuroscience Program Promotion and Recruitment Activities

7.1 Publications and Acknowledgments. All student publications, including abstracts, journal articles, and theses, should acknowledge the Neuroscience Program along with other University acknowledgments. Students supported by the Neuroscience training grant should acknowledge the grant number in all publications. This is our best form of advertisement for our Program. Since we want our Neuroscience Library to include copies of all theses by our students, please be sure and provide one bound copy of the final version of your thesis to the Neuroscience Program at the same time you turn it in to the Graduate School. The Neuroscience Program will cover the costs of the one bound copy required for the program.

After you leave the University, we want to keep up with your progress as a scientist. Please keep the Program informed as you continue with your postdoctoral work. From time to time, we may request that you send us your complete CV. This will help us document the success of our students for future grant proposals and renewals.

7.2 Participation in Recruitment Functions. During February/March each year, prospective student applicants visit our program for interviews. It is in the Program’s best interest to attract and retain the best of these prospective students. To do this we need the help of current students and Neuroscience faculty who can convince these individuals that our Program is the place to be! When asked, please be willing to spend some time with prospective students during dinners or other functions. Our Neuroscience Program can flourish with your help.

8. Information for New Students

8.1 Program Contact Information
Neuroscience Program
Director: Sukumar Vijayaraghavan
Administrator: Deanne Sylvester.
MS 8315, 12800 E. 19th Ave
Aurora, CO 80045
(303)724-3120
www.ucdenver.edu/neuroscience

8.2 Housing. The Student Assistance Office (Office Annex 1C36, x. 57620) can provide apartment directories, rents, a computer search for available units, and roommate matching. They also have other resources available on campus life and student organizations. A link to their web site is on our Neuroscience web site under the Resources tab.

8.3 Colorado Residency. If you are a U.S. citizen and not already a Colorado resident, you will need to change your residence status prior to fall semester of your second year. The Neuroscience Program will only pay out-of-state tuition during the first year. Please stop by the Admissions and Records Office during the first few weeks of school in your first year to ask for instructions on changing your residency or you can check http://www.ucdenver.edu/student/ webpage for instructions. Normally you must be able to establish physical presence in the state for a full year before being granted in-state status. See the information provided by Admissions and Records for details.

8.4 Payroll Paperwork. Before you can receive your stipend, you must fill out the appropriate paperwork with the Neuroscience Program and the Graduate School payroll liaison. Note: An original social security card is required before you can be entered in the University payroll system. If you do not have an original card, you must apply for one immediately after you arrive. Be sure to get a letter from the clerk in the social security office stating that you have applied for a new card. A copy of this letter must be given to the Payroll and Benefits office before you can be paid. When your new card arrives, bring your card to the payroll liaison so a photocopy of your card can be kept in your file.

8.5 Health Insurance. All students are required to be covered by health insurance. You must sign up for the
University Student Health Insurance Program unless you have another plan in place and specifically waive the University plan. Before Fall semester each year, you will receive a form to fill out to select the student health plan or to waive it. Please notify the Neuroscience office if you plan to waive the student insurance. For more information on the plan and what it covers, contact Student Insurance, x. 50800. Also, each student is responsible for making sure that s/he has health insurance coverage each semester. If a student registers for at least 5 credits or more, then s/he is considered a full-time student and University Student Health Insurance coverage is provided. Make sure you sign up for it with the Student Insurance office. The Student Health Insurance coverage is effective until August 31 each year.

8.6 ID Cards. You will receive a University ID Card at Graduate School or Neuroscience Program orientation. You will need this card for library privileges and building access after-hours and weekends.

8.7 Course Registration. The current year’s course book showing course numbers and details can be picked up from the admissions office or can be found online at www.ucdenver.edu/gs. Registration is completed online.

Note: You are responsible for knowing registration and drop/ add deadlines each semester, and making sure you have registered on time. Late registration results in a $60 fine. The Neuroscience Program will not pay any late charges assessed because of missed deadlines! You will be responsible for paying any of these charges yourself.

Note: You must register for at least 5 credits to be considered a fulltime student. A minimum of 5 credits are required in order to be eligible for University Student Health Insurance coverage. You must register for 1 credit in the summer in your second and above years. (The coverage is effective until August 31 of each year).

8.8 Tuition Bills. A few weeks following registration, you will receive a tuition bill via email. Please forward these bills to the Neuroscience office for payment as soon as you receive them. You will be personally responsible for any late charges if you do not bring your bill in before the payment deadline.

8.9 Parking. Most students either walk, bike, or take the bus. To find out where to park at the Anschutz Medical Campus, go to the Parking Office in Building 500 on the ground floor across from the Information Desk. Discount RTD bus passes are also sold there. There are bicycle racks located conveniently to most of the buildings; however, you need to supply your own lock. You may also look at the Parking and Transportation website located at http://www.ucdenver.edu/facilities/parking/.

******** END OF HANDBOOK ********

This handbook does not constitute a contract with the University of Colorado, School of Medicine, either expressed or implied, and the University reserves the right at any time to change, delete, or add to any of the provisions at its sole discretion. Furthermore, the provisions of this document are designed by the University to serve as guidelines rather than absolute rules, and exceptions may be made by the School of Medicine on the basis of particular circumstances.
