Seeking individuals who are at a high risk for diabetes or have been told are “borderline” or “pre-diabetic”

We are looking overweight individuals between the ages of 18-65 years old to participate in a study that will compare the effects of two medications on fat and glucose metabolism.

You may be eligible for this research study, if you are:

- 18-65 years old
- Above ideal weight (BMI 28-38)
- Non diabetic

Duration of Study: This is a 16-week study at the General Clinical Research Center. It involves measurement of insulin sensitivity, muscle and fat biopsies.
