Participants with Chronic Kidney Disease and Vitamin D Deficiency Needed for a Research Study

We are looking for men and women to participate in a research study examining whether nutritional or active vitamin D supplementation will improve blood vessel function.

We need men and women who are:

- age 18-80 years old
- with chronic kidney disease stage 3B or 4 (estimated GFR 44-15 ml/min)
- with vitamin D deficiency or insufficiency
- women must not be pregnant or breastfeeding

Participants will receive at no cost, information regarding their overall health status; including testing for blood pressure, kidney function, vitamin D status, cholesterol, and blood vessel function.

For more information contact Ellie Karimkhani at 303-724-2275 or email elhum.karimkhani@ucdenver.edu
