## DONJOY ICEMAN COLD THERAPY UNIT

Your physician recommends a cold therapy unit to be used following your surgery. Here are some reasons why it is recommended:

**Postoperative Pain:** The Iceman Cold Therapy Unit helps aid in your rehabilitation as well as postoperative pain and swelling. Pain when poorly managed can slow the healing process and increase stress. Cold therapy is a better pain management system since it decreases pain medication usage and facilitates faster recovery.

**Better Than Ice Bags:** An ice bag has limitations – it does not last long, is applied intermittently and is inconvenient. An Iceman lowers your skin temperature more consistently and evenly. It provides up to 7 hours of continuous cold therapy. Simply fill the unit with ice and water to begin treatment.

### What You Need To Know:

**How Much Will I Pay:** On average, most patients use their Iceman for 10 days after surgery so the average cost is \$15.00 a day. Your physician has arranged for you to purchase a unit with special discounted pricing through Total Orthopedics, Inc. Your cost to purchase the cold therapy unit is \$150.00. The advantage is that you own the unit. You can use it pre and postoperatively and before/after physical therapy sessions.

**Can I Submit This To My Insurance:** TOI is unable to bill insurance for this item; however you may submit a claim to your insurance company for partial or full reimbursement. We cannot guarantee payment. The HCPCS code needed for your claim is E0218.
