Dr. Mónica I. Feliú-Mójer grew up in rural Puerto Rico, catching lizards and with a cow in her backyard, which sparked her interest in all things biology. She taps into her professional and cultural backgrounds to empower individuals from underrepresented communities, particularly Latinxs, through storytelling, education, and mentoring. She leads communications and science outreach for CienciaPR, a non-profit and global community transforming science education and training in Puerto Rico. She also works with the non-profit iBiology, where she leads science communication trainings and produces the video series “Background to Breakthrough”, exploring the intersections of culture, identity, and research of underrepresented scientists. Mónica earned her BS in Human Biology at University of Puerto Rico in Bayamón, and her PhD in Neurobiology at Harvard University. She has received numerous awards, including the NSF Graduate Research Fellowship and COPUS Paul Shin Memorial Award. Her work has been featured on Telemundo, Scientific American, and Latino USA, among others. You can learn more about her on her website (www.monicafeliu.me) and find her on Twitter: @moefeliu.
