Few things are as disappointing as not getting your grant proposal funded, but it’s important to remember that all of the most funded researchers have had many proposals declined. What makes them successful, though, is that they didn’t let those rejections stop them. They listened to their reviewers, worked with their Program Officer, went back to the drawing board, and resubmitted a better proposal. Join us for this seminar where a faculty expert will discuss the resubmission process and how to be successful through it.
