For Research Study

Rocky Mountain MS Center on the Anschutz Medical Campus is looking for women with relapsing-remitting, secondary-progressive or primary-progressive multiple sclerosis for a 12-month study. The study is looking to see if there is cognitive improvement with the treatment of oral estriol as compared to oral placebo. If you are currently on standard MS treatment, you will NOT be asked to discontinue your current treatment.

We are looking for:

- Women 18-50 years old
- Diagnosed with definite relapsing-remitting, secondary-progressive multiple sclerosis or primary-progressive multiple sclerosis
- MS disease duration of 15 years or less
- On stable dose of standard MS treatment with Copaxone®, Betaseron® (or Extavia®), Rebif®, Avonex®, Gilenya®, Aubagio®, Tecfidera®, or no treatment

You are not eligible for the study if you are pregnant, breast-feeding, smoke, or have other serious medical conditions.

If you are interested, call Brittany Kling at (303) 724-6247 for further information and a 20-minute telephone screening to determine initial eligibility for the study.
