A Treatment Research Program for Teens with ADHD & Marijuana and Tobacco Use

YOU MAY BE QUALIFIED IF YOU:

- Are 13 – 19 years old
- Are experiencing symptoms of Attention Deficit Hyperactivity Disorder (ADHD), for example: trouble paying attention, easily distracted, feeling restless
- Smoke marijuana and tobacco regularly
- Are willing to take medication or placebo (inactive substance/sugar pill) for ADHD

If you meet the criteria above, you may be eligible to participate in a confidential research study being conducted by the University of Colorado Denver. The purpose of this study is to find out if a medication called bupropion SR can help teenagers with ADHD and marijuana and tobacco problems.

Final eligibility will be determined during two screening visits conducted by trained professionals and supervised by a psychiatrist.

If you are found eligible, you would then qualify for the 16-week study, which involves:

- being assigned at random to receive bupropion or placebo; you will be taking the medication or placebo every day for sixteen weeks
- meeting weekly with a research nurse
- participating in weekly 1-hour Cognitive-Behavioral Therapy sessions
- answering questions about your drug use and ADHD
- giving a urine sample to test for drugs of abuse

You will be compensated for your time and travel.

For information, contact the Adolescent Research Center at (303) 935-5892.

This study is funded by a grant from the National Institute on Drug Abuse (NIDA R01 DA022284)
Approved by COMIRB, #08-0178, Approved 5/6/11
The study Principal Investigator is Paula Riggs, M.D., Professor of Psychiatry, UC Denver,
(303) 935-5892
