

SUPPORT NEEDS AND LONG-TERM OUTCOMES IN ADULTS WITH MULTIPLE SCLEROSIS

We are asking people with multiple sclerosis (MS) to be a part of our study at the University of Colorado by filling out a survey. Please join us!

The goal of the study is to learn more about the unique challenges people with multiple sclerosis may face in their lives. We hope to find ways to help prevent these challenges, or ways we can help support people with MS better.

This survey will ask you questions about your multiple sclerosis diagnosis and treatment. It will also ask questions about things in your life that may have been impacted by your diagnosis—including your education, job, quality of life and income.

You may take this survey if:

- You have a diagnosis of multiple sclerosis from a neurologist.
- You are over the age of 18 years old.
- It has been 5 years or more since your first symptom of multiple sclerosis.
- You have not filled out this survey in the past.

Please scan the QR code or enter the link to access the survey.

After finishing the survey, you can choose to be entered into a drawing for a \$100 gift card.

Thank you for reading through this flyer, and thank you for considering the study!
