

Department of Neurosurgery DID YOU KNOW??

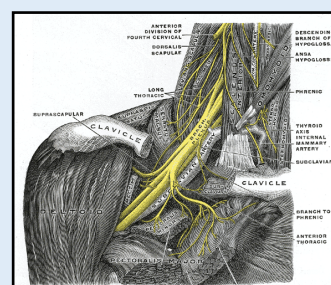

Department of Neurosurgery
UNIVERSITY OF COLORADO ANSCHUTZ MEDICAL CAMPUS

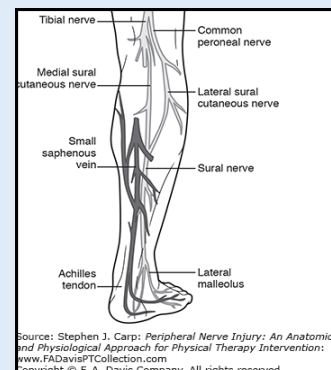

Brachial Plexus & Peripheral Nerve Injury Program:

What is it?

The **brachial plexus** is a network of **nerves** running from the cervical spinal cord in the neck to the shoulder, arm and hand. **Brachial plexus and peripheral nerve** injuries refer to injuries to the group of **nerves** that supply the arms, hands and legs. These injuries include birth-related palsies, trauma, **peripheral** or **brachial plexus** tumors.

Our monthly multidisciplinary clinic, started over two decades ago, involves the diagnosis and treatment of these complex cases. Patients are evaluated by a multi-disciplinary team of physicians who have trained at some of the best academic and clinical centers in the nation. This team includes neurosurgeons, hand and microvascular surgeons, physical medicine & rehabilitation physicians, and other specialists and experts who collaborate to evaluate and treat each patient individually.
