Dr. Fernández has extensive experience developing and evaluating health promotion interventions, and conducts research to improve dissemination and implementation of effective programs. Her research has focused on cancer prevention and control among underserved populations. She has conducted both qualitative and quantitative studies that range from the identification and description of basic behavioral conceptual models of cancer screening and vaccination to the development and evaluation of new interventions to increase cancer control that have resulted in over 100 peer reviewed publications. She is an expert in dissemination and implementation research and conducts studies to understand and intervene to accelerate the use of evidence-based cancer control interventions in real-world settings.
