

Leveraging Automaticity for Healthy Behavior Change

January 16, 2019 Aurora CO

ACCORDS, Children's Hospital Colorado

Gretchen Chapman, PhD

Carnegie Mellon University

Can we harness behavioral science to encourage healthy behavior?

Rational vs. Behavioral Approaches to behavior change

Rational

- Beliefs & information
- Incentives
- Regulation

Behavioral

- Information format
- Social context
- Automation

Increasing Vaccination: Putting Psychological Science Into Action

Increasing Vaccination: Putting Psychological Science Into Action

Intervening on behavior directly

Most effective interventions to boost vaccination (Brewer et al., 2017)

- Provider recommendation
- Presumptive recommendation
- On-site vaccinations
- Default vaccination appointments
- Incentives
- Vaccination requirements

Should Governments Invest More in Nudging?

**Shlomo Benartzi¹, John Beshears², Katherine L. Milkman³,
Cass R. Sunstein⁴, Richard H. Thaler⁵, Maya Shankar⁶,

Influenza Vaccinations (Increase in Adults Vaccinated per \$100 Spent)

■ Nudge

□ Traditional Intervention (financial incentives, educational programs, or some combination of the two)

Benartzi et al, 2017

Rational vs. Behavioral Approaches to behavior change

Rational

- Beliefs & information
- Individual outcomes
- Regulation

Behavioral

- Information format
- Social context
- Automation

Information Format

- It's not what you say; it's how you say it

Prostate Cancer Early Detection

by PSA screening and digital-rectal examination.

Numbers are for men aged 50 years or older, not participating vs. participating in screening for 10 years.

	1,000 men without screening	1,000 men with screening
Benefits		
How many men died from prostate cancer?	8*	8
How many men died from any cause?	200	200
Harms		
How many men were diagnosed and treated** for prostate cancer unnecessarily?	—	20
How many men without cancer got a false alarm and a biopsy?	—	180

* This means that about 8 out of 1,000 men (50+ years of age) without screening died from prostate cancer within 10 years.

** With prostate removal or radiation therapy, which can lead to incontinence or impotence.

Prostate Cancer Early Detection

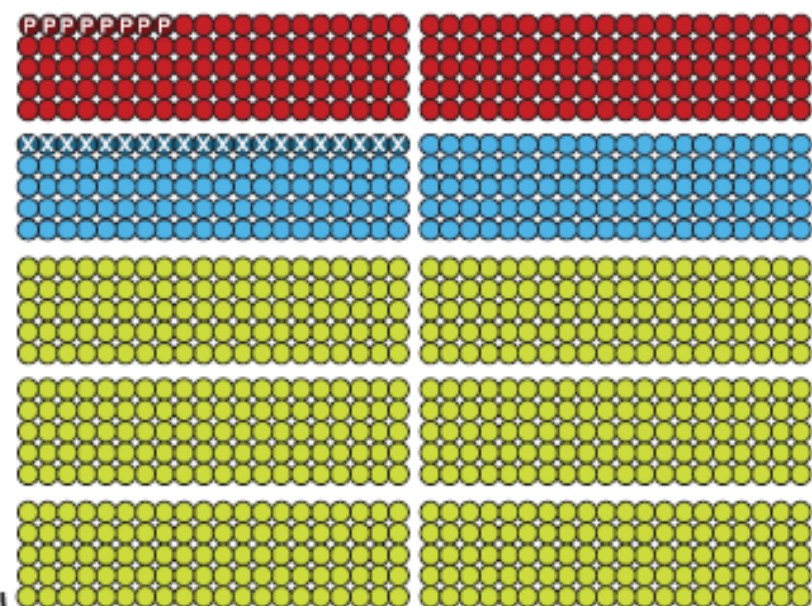

by PSA screening and digital-rectal examination.

Numbers are for men aged 50 years or older, not participating vs. participating in screening for 10 years.

1,000 men without screening:

1,000 men with screening:

● Men dying from prostate cancer:	8	8
● Men dying from any cause:	200	200
⊗ Men that were diagnosed and treated for prostate cancer unnecessarily:	—	20
● Men without cancer that got a false alarm and a biopsy:	—	180
● Men that are unharmed and alive:	800	600

Framing Effects & the HPV Vaccine

- Gardasil (c 2006) protects against the two strains of HPV that cause 70% of cervical cancers

Framing Effects & the HPV Vaccine

Condition 1

80

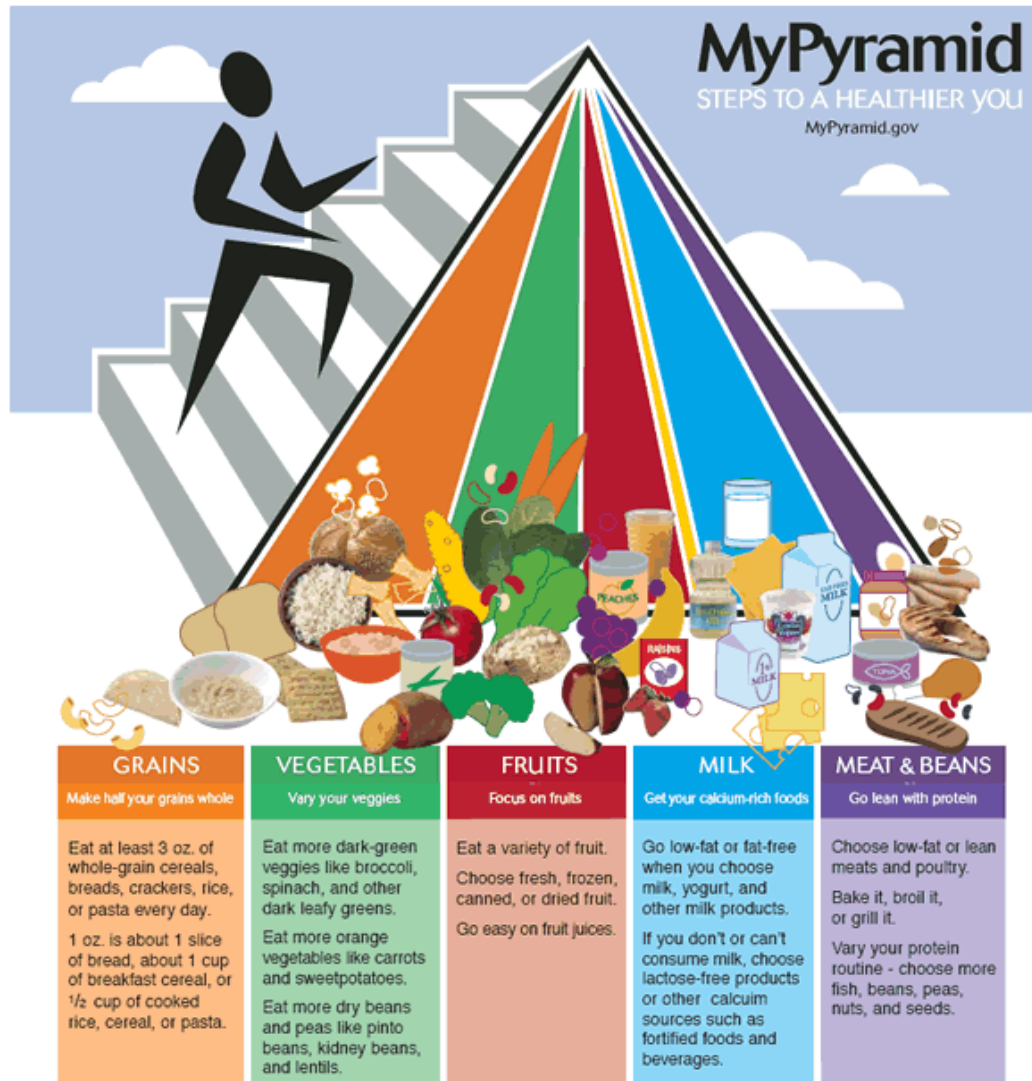

- Imagine there is a vaccine available; it's very safe, and **100% effective in preventing virus infections that cause 70% of known cases** of a specific type of cancer. In people who aren't vaccinated, about 4% get this type of cancer. How likely would you be to get vaccinated?

Condition 2

67

- Imagine there is a vaccine available; it's very safe, and **70% effective in preventing virus infections that cause all the known cases** of a specific type of cancer. In people who aren't vaccinated, about 4% get this type of cancer. How likely would you get vaccinated?

Dietary Guidelines

Difference between healthy and unhealthy form

Rational vs. Behavioral Approaches to behavior change

Rational

- Beliefs & information
- Individual outcomes
- Regulation

Behavioral

- Information format
- Social context
- Automation

Social Norms

- Help the hotel save energy 16%
- Partner with us to help the environment 31%
- Almost 75% of guests reuse towels 44%
- 75% of the guests who stayed in this room reuse towels 49%

Goldstein, Cialdini, & Griskevicius (2008) *JCR*

Schultz, Wesley, Nolan, Cialdini, Goldstein, & Griskevicius (2007) *Psych Sci*

Social Comparison & Electricity Use

Social Norms

Figure 2: Rate of antibiotic items dispensed per 1000 weighted population for the feedback intervention, September, 2014, to April, 2015
Error bars represent 95% CIs.

Provision of social norm feedback to high prescribers of antibiotics in general practice: a pragmatic national randomised controlled trial

Michael Hallsworth, Tim Chadborn, Anna Sallis, Michael Sanders, Daniel Berry, Felix Greaves, Lara Clements, Sally C Davies

The Lancet, 387.10029 (2016): 1743-1752.

Opioid prescribing decreases after learning of a patient's fatal overdose

Jason N. Doctor^{1*}, Andy Nguyen¹, Roneet Lev², Jonathan Lucas³, Tara Knight¹, Henu Zhao¹, Michael Menchine⁴

Table 3. Adjusted daily average milligram morphine equivalents (MMEs) dispensed per prescriber among persons randomized to the intervention or control groups. Values in parentheses are 95% CIs with 5% trimmed means.

Parameter	Randomization group	
	Letter	Control
Prescribers followed	388	438
Preintervention	72.5 (71.3 to 73.7)	71.6 (70.3 to 72.8)
Postintervention	65.7 (63.8 to 67.5)	71.7 (70.0 to 73.5)
Increment (pre- to post-)	-6.8 (-9.9 to -3.8)	0.1 (-2.8 to 3.2)
Difference in increment	-6.9 (-13.1 to -1.0)	
P value	0.001	

Implied Norms

Reicks et al., 2012; Melnick & Li, 2018

Social Comparisons

Pedometers

- Encourage walking
- Track progress
- Provide feedback

Research Question

- Is feedback more motivating when it is compared to a reference point?

Chapman, Colby, Convery, & Coups (2015)

Funded by the Robert Wood Johnson Foundation

Social Comparison

1 week of baseline with sealed pedometer

Random assignment to condition

Control

Social Comparison

2 weeks of active phase with open pedometer

	Example	Day One	Day Two
Date:	5/15/13 <i>Wed.</i>	Tuesday 6/11/13	Wednesday 6/12/13
Time On Pedometer	X:XX	7:00 AM Edit time	6:15 AM Edit time
Time Off Pedometer	X:XX	10:00 PM Edit time	7:30 PM Edit time
Pedometer reading at end of day	X,XXX	8945 Edit steps	15872 Edit steps
Rank	<i>You did better than 70% of other people.</i>	You did worse than 79% of other people.	You did better than 87% of other people.
Notes	<i>Walked more during break & lunch</i>	<div></div> Enter Note	<div></div> Enter Note

Reminders & Recalls

Automating the action prompt

HPV vaccination	Intervention, Enrolled, $n = 374$, %	Control, $n = 555$, %	Adjusted Relative Risk (95% CI)	P
Received dose 2	83	71	1.14 (1.07–1.22)	<.001
Received dose 3	63	38	1.59 (1.39–1.83)	<.001

Kempe, A., O'Leary, S. T., Shoup, J. A., Stokley, S., Lockhart, S., Furniss, A., ... & Daley, M. F. (2016). Parental choice of recall method for HPV vaccination: A pragmatic trial. *Pediatrics*, 137(3), e20152857.

From: **Collaborative Centralized Reminder/Recall Notification to Increase Immunization Rates Among Young Children: A Comparative Effectiveness Trial**

JAMA Pediatr. 2015;169(4):365-373. doi:10.1001/jamapediatrics.2014.3670

Figure Legend:

Effectiveness of Collaborative Centralized (CC) vs Practice-Based (PB) Reminder/Recall ApproachesA, Percentage of children receiving any vaccination (absolute percentage point difference, 5%). B, Percentage of children achieving up-to-date (UTD) status with vaccinations (absolute percentage point difference, 4%). Data are unadjusted.

^aP < .001 compared with the CC reminder/recall approach.

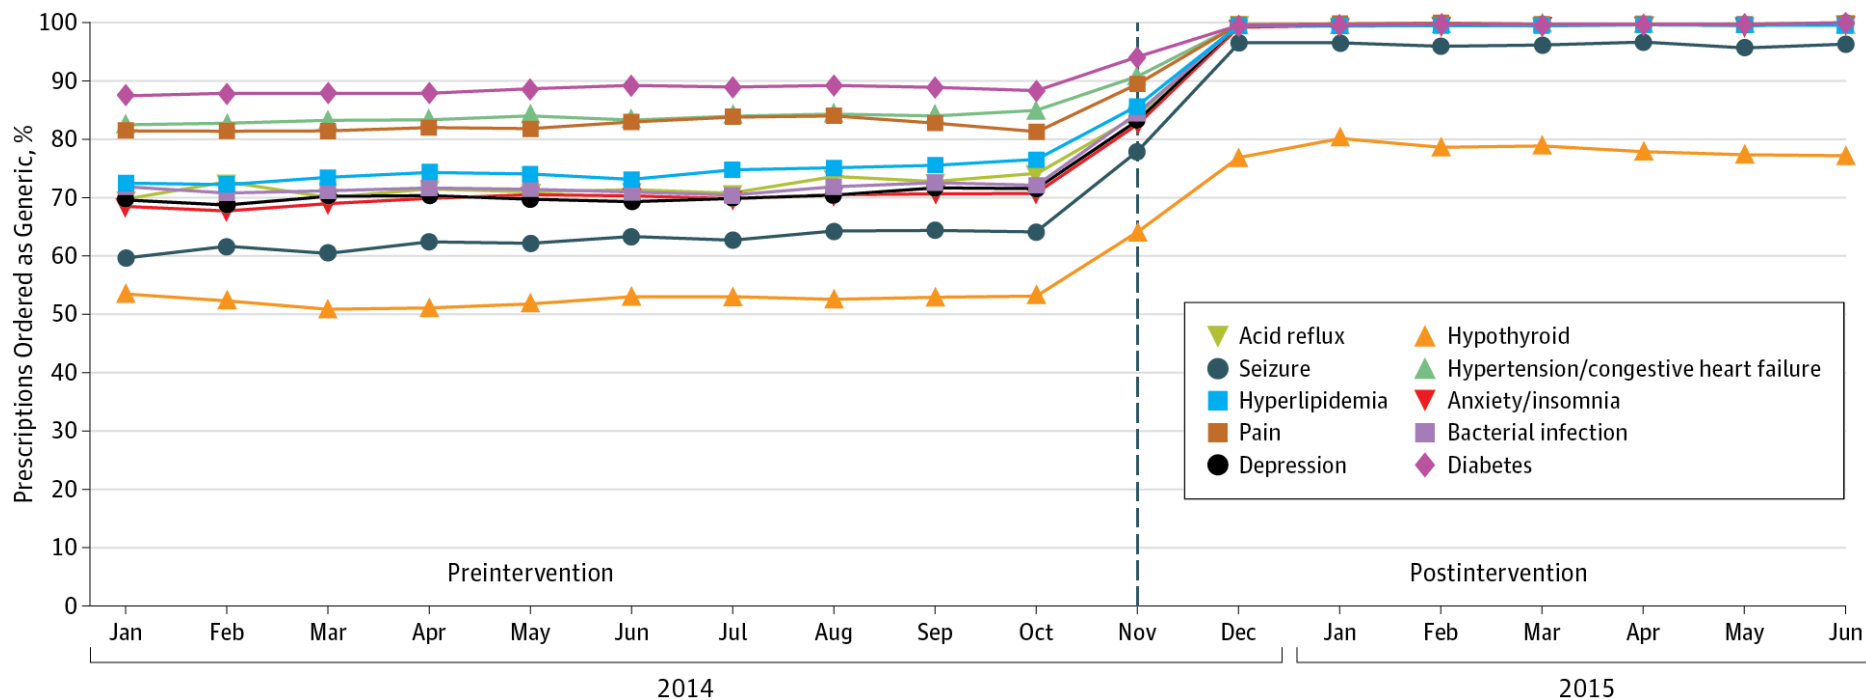

^bP = .001 compared with the CC reminder/recall approach.

Default Effect

Effective organ donation consent rates, by country. Explicit consent (opt-in, gold) and presumed consent (opt-out, blue). Johnson & Goldstein (2003)

Generic Medication Prescriptions by Default

Patel et al., 2016, JAMA

Opioid Prescriptions by Default

- Before: default number of opioid pills auto-populated in the EMR = **30**
 - Median number of pills prescribed: **20**
- After: default number of opioid pills auto-populated in the EMR = **12**
 - Median number of pills prescribed: **12**

Chiu, A. S., Jean, R. A., Hoag, J. R., Freedman-Weiss, M., Healy, J. M., & Pei, K. Y. (2018). Association of lowering default pill counts in electronic medical record systems with postoperative opioid prescribing. *JAMA surgery*, 153(11), 1012-1019.

Flu Shot Default Appointments

- Opt-in condition
 - Letter stating that flu shots were available
 - Call to make an appointment
- Opt-out condition
 - Letter with pre-scheduled appointment
 - Call to change or cancel appointment
- No letter control
